About VxPro

VideoXpert Professional consists of three major components. While you can install all three, you should only install the VxPro components that best suit your needs on any workstation; in particular, you should avoid installing or running VxPro Server services on non-server hardware.

- **VxPro Server** is what enables you to run a VideoXpert Professional server. Recording, media routing, user administration, permission checking, and all the server-side operations that you would expect from your VMS are consolidated within VxPro Server.

- **VxToolbox** is the administrative application for VxPro, from which you can configure VxPro servers and find cameras. You can install this application on the server itself and configure VxPro locally, or you can install VxToolbox on remote workstations and configure VxPro remotely, after performing basic initial configuration on the server (IP address, installing VxPro Server, etc).

- **VxOpsCenter** is the operator application; the application that operators will use to view and recall video from the system.

Typical Deployments

- For **Rack Mounted Servers**, install VxPro Server and VxToolbox.
- For **Desktop Servers (Pelco Flex and Eco models)**, install VxPro Server, VxToolbox, and VxOpsCenter.
- For **Workstations**, install VxOpsCenter and VxToolbox (if configuring the server remotely).

Getting Started with VxPro

Ensure that your VxPro server is on the network and is associated with an NTP server before you run the VxPro installer.

Download the latest version of VxPro, posted to https://www.pelco.com/vxpro, before you begin.

1. Run the VxPro installer.
2. Accept the license agreement.
3. Click **Begin Installation**.
   
   **NOTE:** If you are upgrading an existing version of VxPro, click **Begin Update**.

4. Click to select the checkboxes for the Applications to install. For example, if installing on a server, you might not need to install VxOpsCenter; if installing on a workstation, you should not install the VxPro Server application.

5. Click to select the radio button for **Default Installation** or **Custom Installation**, and then click **Next**.
   
   All installations, default or custom, will require you to specify the directory for video storage.

6. If you selected **Custom Installation**, for each Application, click **Browse**, browse to the directory in which to install each Application, and then click **Next**.

7. Review the directories for VxPro Server Video Storage. If necessary, for each directory, click **Browse**, and then browse to the correct directory.

8. Click **Install**.

9. (Optional) To immediately configure VxPro (using VxToolbox), click **Configure**. In most cases, you should perform basic configuration using VxToolbox immediately after installation.
Performing Initial VideoXpert Server Configuration Using VxToolbox

VideoXpert Enterprise and VideoXpert Professional each come with a 60-day trial license. During this 60-day trial, you have access to all VideoXpert features, and you can ignore the Licensing tab within VideoXpert.

To use VideoXpert beyond the 60-day trial, you must apply a license to the server. Licensing requires either an internet connection on the VideoXpert server itself, or access to a separate computer with internet access.

1. After installing VideoXpert, click Configure or run VxToolbox for the first time on your system.
2. Perform the steps in the section titled “Adding Systems”.
3. Set the password for the admin user on your system.

![Add a new VX System](image)

**NOTE:** The default user name is admin. You must set a new password.

4. (Optional) Click to select the checkbox to ensure that the system checks the SSL/TLS Certificate when connecting to the server. Enable this feature if your organization uses signed HTTPS certificates and the certificate has already been loaded using VxToolBox.
5. Click Add.
6. In the VxToolbox Password Confirmation Window, click Set Password (recommended) or No Thanks.
7. If you clicked Set Password, in the Set VxToolbox Password dialog box, enter a password in the Password and Retype Password fields, and then click Save.

8. In the Configure VxToolbox dialog box, click OK.

9. If you enabled SSL/TLS Certificate checking, you might be required to interact with more dialog boxes. If so, follow the prompts.

10. In the Configuration Required dialog box, enter a Company Name. This is the name by which the Pelco licensing portal will recognize your VX server. The name cannot be changed later.

11. Click Save & Continue.

The VxToolbox application opens.

Changing the VxToolbox Password

When starting VxToolbox, the application requests credentials. These credentials are local to the workstation and your VxToolbox installation; they do not log you in to any system or camera. Rather, your VxToolbox credentials protect your settings and the credentials for the individual cameras and systems you want to access from other users on the same workstation.

After logging in to VxToolbox, you can add systems with independent credentials, and pass credentials to cameras requiring them (closed authentication or third-party cameras).

Because your local VxToolbox environment may connect you to multiple systems and cameras, it is recommended that you protect your credentials and log out when you have finished using the application.
To change your VxToolbox password:
1. Click the menu icon ( ), and then select **Change VxToolbox Password**.
2. In the **Account Settings** dialog box, enter a new password, and then click **Save Changes**.

**Managing the System**

For VideoXpert Enterprise, you must perform certain administrative actions from the VideoXpert Admin Portal; but for VideoXpert Professional, you can perform all administrative actions from VxToolbox. For all VideoXpert Systems, VxToolbox provides a single interface from which to manage and configure both cameras and your VideoXpert Systems. From VxToolbox, you can manage any system that you can access by IP address.

Selecting a system (by name) from the **VX System** menu allows you to configure that system; the settings you see are relevant to the system, and any discovery operations you perform are issued directly from that system.

Use the **VX System** menu to switch between various VideoXpert systems.

**Adding Systems**

VxToolbox allows you to administer systems remotely. To add a system to VxToolbox, you must have network access to the system and your user account must be assigned the administrative role.

1. Click the menu icon ( ) at the upper right corner of the window, and then click **Manage VX System Connections**.
2. Click the **Add a new VX System** icon ( ).
3. Enter an IP address in the **Server Address** field.
4. Enter a value in the **Server Port** field, or use the default port.
5. Enter the **Admin Username** and **Password** for the system you are adding.
6. If an SSL/TLS certificate has been uploaded and configured, click to select the checkbox for **Check SSL/TLS Certificate...** to validate the certificate.
7. Click **Add**.
8. Click the (x) at the top left of the **Manage VX System Connections** window to close it.

**Editing the System Validation**

You can change whether the SSL/TLS certificate is validated when connecting to a system from VxToolbox. Editing a system only affects your settings within your local VxToolbox installation.

1. Click the menu icon ( ) at the upper right corner of the window, and then click **Manage Vx System Connections**.
2. Select the system you want to edit.
3. Click the *Edit VX System* icon ( ) to edit system settings.
   a. Enter the *Admin Username*.
   b. Enter the *Password*.
   c. Click to select or deselect the checkbox for *Check SSL/TLS Certificate*...

![Edit VX System dialog box](image)

4. Click **Save**.

5. In the *Update* dialog box, click **OK**.

6. Click the **X** at the top left of the *Manage VX System Connections* window to close it.

### Removing a System

You can remove a system from VxToolbox. It can be re-added at any time.

1. Click the menu icon ( ) at the upper right corner of the window, and then click *Manage Vx System Connections*.

2. Select the system you want to remove.

3. Click the **Delete** icon ( ) to remove the system.

4. In the *Delete System* dialog box, click **OK** to confirm the deletion.

5. Click the **X** at the top left of the *Manage VX System Connections* window to close it.

### Discovering Cameras

VxToolbox can search the local network or the network belonging to any particular VideoXpert system for cameras. Or you can add cameras manually to the VxToolbox list. Through VxToolbox, you can manage camera settings for all the devices on the network, without having to go to individual camera interfaces.

VxToolbox can discover Pelco cameras or third-party cameras supporting ONVIF.

**NOTE:** You must be connected to a VideoXpert system to add cameras to the system.

### Finding Cameras (Quick Discovery)

Click the *Quick Discovery* icon ( ) to perform a quick search for cameras. This option discovers cameras, but does not add them. You must add cameras manually or use the *Quick Discovery and Add* option.
Finding and Adding Cameras (Quick Discovery and Add)

1. Click the Advanced Discovery Options icon to the right of the Quick Discovery icon.
2. Click Quick Discovery and Add.
   
   All Devices and Data Sources that are discovered by VxToolbox are added to the VX System to which you are connected.

Finding Cameras (Advanced Discovery)

Using Advanced Discovery, you can search for cameras by protocol type or you can add individual cameras by IP address. You may want to add cameras that do not support ONVIF or Pelco discovery methods using the IP address.

1. Click the Advanced Discovery Options icon to the right of the Quick Discovery icon.
2. Click Advanced Discovery.
3. To use Quick Discovery, but specify using either SSDP (Simple Service Discovery Protocol) or WS-Discovery (Web Services Dynamic Discovery):
   a. Click to select the radio button for Quick Discovery.
   b. Click to select or deselect the checkbox for SSDP.
   c. Click to select or deselect the checkbox for WS-Discovery.
4. If you want to discover cameras by IP address:
   a. Click to select the radio button for Discover by IP.
   b. Enter a value in the IP Address field.
      
      If you enter an invalid IP address, the field will show as outlined in red. Correct the address and continue.
   c. (Optional) Enter a value in the Port field.
   d. (Optional) Click Add Another, and repeat the previous two steps.
5. (Optional) Click to select the checkbox to Add discovered cameras to the VX System.
6. Click Discover.
   
   NOTE: While this feature adds cameras to the system, it does not commission them. To commission the cameras, you must select them, right-click a camera that is selected, and then click Commission.

Recognizing Camera Credentials

Some cameras require credentials for you to access their video or change their settings. The Authentication status column provides the status of each device, using the following icons:

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>![Icon]</td>
<td>Device requires authentication.</td>
</tr>
<tr>
<td>![Icon]</td>
<td>Device does not require authentication.</td>
</tr>
<tr>
<td>![Icon]</td>
<td>VxToolbox has authenticated to this device.</td>
</tr>
<tr>
<td>![Icon]</td>
<td>This camera is authenticated in VxToolbox, but not on the system with which it is associated. Click the icon to attempt to authenticate the camera with the system.</td>
</tr>
</tbody>
</table>
Adding Credentials to a Camera

To add credentials to a camera:
1. Select the camera requiring credentials.
2. Enter credentials in the appropriate fields, and then click Submit.

Managing Devices on a System

You must add a device to VideoXpert to make it visible within the system and to manipulate device settings.

- For VideoXpert Enterprise, use Admin Portal to add a device or change device settings.
- For VideoXpert Professional, use VxToolbox to add a device or change device settings.

You must commission a device to view its video or to use its video or resources within VideoXpert. In many cases, commissioning a device requires a license; the type of license required depends on the type of device you are commissioning. In most cases, adding and commissioning devices is a single, simplified operation.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="add" alt="Icon" /></td>
<td>Not added; not commissioned</td>
</tr>
<tr>
<td><img src="commission" alt="Icon" /></td>
<td>Added; not commissioned</td>
</tr>
<tr>
<td><img src="commissioned" alt="Icon" /></td>
<td>Added; commissioned</td>
</tr>
</tbody>
</table>

Add or Commission operations are available from the Cameras tab for the selected system. Commissioning information is shown in the Added/Commissioned (✓) column; you can expose this column by selecting Added/Commissioned from Visibility Options in the filtering pane.

**NOTE:** For VideoXpert Enterprise, licensing information is currently available through the Admin Portal; you cannot determine the number or types of licenses through VxToolbox.

Adding and Commissioning Devices

VxToolbox will only provide adding and commissioning options applicable to the camera(s) you have selected. Add and Commission operations are relevant to the system you have selected from the VX System menu.

1. In the center panel of the Cameras tab, select the devices you want to add and commission.
2. Perform one of the following steps:
   - Right-click the device, and then select Add and Commission to [VX System name].
   - Click the down arrow (▼) to expand the Addition, Commission and Assignment options menu, and then click Add and Commission to [VX System name].
3. If the Recorder Assignment dialog box opens, select a recorder from the drop-down menu, and then click Add.

The icon for the device changes from Not added; not commissioned (☐) to Added; commissioned (✓).
Adding Devices Without Commissioning

The Add operation is relevant to the system you have selected from the VX System menu.

1. In the center panel of the Cameras tab, select the devices you want to add.

2. Perform one of the following steps:
   - Right-click the devices, and then select Add to [VX System name].
   - Click the Add, Commission and Assign Cameras to a recorder icon at the bottom of the center panel.
   - Click the down arrow to expand the Addition, Commission and Assignment options menu, and then click Add to [VX System name].

3. If the Recorder Assignment dialog box opens, select a recorder from the drop-down menu, and then click Add.
   The icons for the devices change from Not added; not commissioned to Added; not commissioned.

Commissioning Devices that were Added Previously

VxToolbox will only provide commissioning options applicable to the camera(s) you have selected, and which were already added. Commission operations are relevant to the system you have selected from the VX System menu.

1. In the center panel of the Cameras tab, select the devices you want to commission.

2. Perform one of the following steps:
   - Right-click the devices, and then select Commission.
   - Click the down arrow to expand the Addition, Commission and Assignment options menu, and then click Commission.

The icons for the devices change from Added; not commissioned to Added; commissioned.

Decommissioning Devices

VxToolbox can decommission the camera(s) you have selected, on the system you selected from the VX System menu.

1. In the center panel of the Cameras tab, select the devices you want to decommission.

2. Perform one of the following steps:
   - Right-click the devices, and then select Decommission.
   - Click the down arrow to expand the Addition, Commission and Assignment options menu, and then click Decommission.

The icons for the devices change from Added; commissioned to Added; not commissioned.

Removing Devices

From VxToolbox, you can remove the device(s) you have selected, on the system you selected from the VX System menu.

1. In the center panel of the Cameras tab, select the devices you want to remove.
2. Perform one of the following steps:
   - Right-click the devices, and then select Remove.
   - Click the Remove cameras from the list and/or VX System icon at the bottom right of the center panel.
   - Click the down arrow to expand the Addition, Commission and Assignment options menu, and then click Remove.

3. In the Remove Device(s) confirmation dialog box, click OK.
   The devices are removed from the list. They can be discovered again at any time.

**Viewing Devices and Data Sources**

The audio and video sources produced by cameras are referred to as data sources. These data sources are not necessarily one per device. For example, a multi-channel encoder may have multiple cameras connected to it, each with its own data source; a camera may have a microphone, producing audio and video data sources.

To view either all devices or all data sources, in the View field drop-down menu, at the top of the center panel, select Devices or Data Sources.

If a device and its data sources are distinguishable, you can see the individual data sources. To do so:

1. Click to select a device (camera).
2. Click the expand icon next to the device.

**Finding and Filtering Existing Sources**

Use filtering options to show the devices and data sources relevant to you within the system or environment you have selected. Filters appear in the left-most panel of the Cameras tab and in some other tabs. Click to expand the Filter panel, and then do one or more of the following.

- Enter values in the Filters Devices field to filter by name, ID, model, IP address, serial number, vendor, or software version.
- Select a source Type from the pull-down menu.
- Select a source Status from the pull-down menu.
- Click in the Tags field, and type in or select a tag for which to filter. Tags are set in VxOpsCenter. Refer to the VxOpsCenter User Guide for more information.
- Click Reset Filters to clear the filters.

**Selecting More Options**

In the left panel, below the Filter, click to expand More Options. Click in the List Shows field, and select the appropriate option from the drop-down menu.

**Selecting Visibility Options**

In the left panel, below More Options, click to expand Visibility Options. Click to select the checkboxes for the fields you want to show in the list of devices; click to deselect the checkboxes for the fields to hide.

**Viewing the License Summary**

In the left panel, below Visibility Options, click to expand License Summary. View the system license information.
Configuring the Rules Engine

The Rules tab allows you to configure events generated by a source to trigger a response.

Managing Rules

Rules can have one or more triggers, zero or more schedules, and one or more responses. There can be multiple rules on the system.

Creating a Rule

1. Click the Rules tab.
2. In the left panel, click the Create a new Rule icon (+). The Edit Mode (right) panel is activated.
3. Enter a value in the Name of Rule field.
4. Click to select the radio button for Active or Inactive.
5. Add one or more triggers for the rule. See the section titled Adding a Trigger.
6. (Optional) Add one or more schedules to the rule. See the section titled Adding a Schedule.
7. Add one or more responses to the rule. See the section titled Adding a Response.
8. When you have finished configuring triggers, schedules, and responses, click Save.

Duplicating an Existing Rule

To use an existing rule as a starting point to create a new rule:

1. Click the Rules tab.
2. (Optional) In the left panel, enter a value in the Search Rules field to filter the rules.
3. Click to select the rule to duplicate.
4. Click the Duplicate the selected Rule icon (+). The Edit Mode (right) panel is activated.
5. Enter a value in the Name of Rule field.
6. Click to select the radio button for Active or Inactive.
7. (Optional) Add, duplicate, edit, or delete one or more triggers for the rule. See the sections titled Adding a Trigger, Duplicating a Trigger, Editing an Existing Trigger, and Deleting a Trigger.
8. (Optional) Add, create a copy of, edit, or delete one or more schedules for the rule. See the sections titled Adding a Schedule, Creating a Copy of an Existing Schedule, Editing an Existing Schedule, and Deleting a Schedule.
9. (Optional) Add, duplicate, edit, or delete one or more responses for the rule. See the sections titled Adding a Response, Duplicating an Existing Response, Editing an Existing Response, or Deleting a Response.
10. When you have finished configuring triggers, schedules, and responses, click Save.

Editing an Existing Rule

1. Click the Rules tab.
2. (Optional) In the left panel, enter a value in the Search Rules field to filter the rules.
3. Click to select the rule to edit.
4. Click the Edit the selected Rule icon (+). The Edit Mode (right) panel is activated.
5. Click to select the radio button for Active or Inactive.

6. (Optional) Add, duplicate, edit, or delete one or more triggers for the rule. See the sections titled Adding a Trigger, Duplicating a Trigger, Editing an Existing Trigger, and Deleting a Trigger.

7. (Optional) Add, create a copy of, edit, or delete one or more schedules for the rule. See the sections titled Adding a Schedule, Creating a Copy of an Existing Schedule, Editing an Existing Schedule, and Deleting a Schedule.

8. (Optional) Add, duplicate, edit, or delete one or more responses for the rule. See the sections titled Adding a Response, Duplicating an Existing Response, Editing an Existing Response, or Deleting a Response.

9. When you have finished editing triggers, schedules, and responses, click Save.

Deleting a Rule
1. Click the Rules tab.

2. In the left panel (list of rules), click the rule to delete.

3. Click the Delete the selected Rule icon ( ).

4. In the confirmation dialog box, click Delete.

Managing Triggers

Add, duplicate, edit, or delete triggers from a rule to control the type of events that will trigger one or more responses.

Adding a Trigger
To add an entirely new trigger to a rule:
1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon ( ). The Edit Mode (right) panel is activated.

4. In the Triggers panel, click the Add New Rule Trigger icon ( ).

5. (Optional) In the Select an Event to trigger this Rule dialog box, narrow the list of events. To do so, you can select a category from the Show drop-down menu; you can also type a value in the Situation Filter field.

6. In the Select an Event to trigger this Rule dialog box, click to select an event.

7. In the Select Event Sources to limit this Trigger for Rule dialog box, click to select the appropriate radio button. The options vary depending on the trigger you have chosen. If you are prompted to do so, make any other necessary selections, and then click Save.

8. When you have finished configuring the rule, click Save.

Duplicating a Trigger
To use an existing trigger as a starting point to create a new trigger:
1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon ( ). The Edit Mode (right) panel is activated.

4. In the Triggers panel, click to select a trigger to duplicate.
5. Click the **Duplicate Rule Trigger** icon ( ).

6. (Optional) Edit the **When this event** settings, associated with the duplicate trigger:
   a. In the **When this event** column, click the edit icon ( ) in the appropriate trigger.
   b. (Optional) In the **Select an Event to trigger this Rule** dialog box, narrow the list of events. To do so, you can select a category from the **Show** drop-down menu; you can also type a value in the **Situation Filter** field.
   c. Click to select the event.
   d. Click **Save**.

7. (Optional) Edit the **is generated by** settings, associated with the duplicate trigger:
   a. In the **is generated by** column, click the edit icon ( ) in the appropriate trigger.
   b. In the **Select Event Sources to limit this Trigger for Rule** dialog box, click to select the appropriate radio button. The options vary depending on the trigger you have chosen. If you are prompted to do so, make any other necessary selections, and then click **Save**.

8. When you have finished configuring the rule, click **Save**.

### Editing an Existing Trigger

To use an existing trigger as a starting point to create a new trigger:

1. Click to select the **Rules** tab.
2. Click to select the rule to edit.
3. Click the **Edit the selected Rule** icon ( ). The **Edit Mode** (right) panel is activated.
4. In the **Triggers** panel, click the trigger to edit.
5. Click the **Duplicate Rule Trigger** icon ( ).
6. (Optional) Edit the **When this event** settings, associated with the duplicate trigger:
   a. In the **When this event** column, click the edit icon ( ) in the appropriate trigger.
   b. (Optional) In the **Select an Event to trigger this Rule** dialog box, narrow the list of events. To do so, you can select a category from the **Show** drop-down menu; you can also type a value in the **Situation Filter** field.
   c. Click to select the event.
   d. Click **Save**.
7. (Optional) Edit the **is generated by** settings, associated with the duplicate trigger:
   a. In the **is generated by** column, click the edit icon ( ) in the appropriate trigger.
   b. In the **Select Event Sources to limit this Trigger for Rule** dialog box, click to select the appropriate radio button. The options vary depending on the trigger you have chosen. If you are prompted to do so, make any other necessary selections, and then click **Save**.

8. When you have finished configuring the rule, click **Save**.

### Deleting a Trigger

If a trigger is no longer needed, delete it.

1. Click to select the **Rules** tab.
2. Click to select the rule to edit.
3. Click the **Edit the selected Rule** icon ( ). The **Edit Mode** (right) panel is activated.
4. In the **Edit Mode** panel, click to select the trigger to delete.
5. Click the delete icon ( ).
6. When you have finished configuring the rule, click Save.

**Managing Schedules**

You can set one or more schedules to limit the times during which an event triggers a response; or you can leave the Schedules panel unpopulated to allow the trigger/response combination at all times.

**Adding a Schedule**

To create an entirely new schedule:

1. Click to select the Rules tab.
2. Click to select the rule to edit.
3. Click the Edit the selected Rule icon ( ). The Edit Mode (right) panel is activated.
4. Click the Edit the selected Schedule icon ( ).
5. Click to select the Add a new schedule icon ( ).
6. In the Create Schedule dialog box, enter a value in the Display Name field.
7. Click to select the radio button for the increments.
8. (Optional) Click to select the checkbox for 24-Hr. Time.
9. Click and drag in the calendar to select the times.
10. (Optional) Click to select the checkbox for Within limited date range, if you selected Within limited date range, you must also select the Start on and End after values.
11. Click Add.
12. When you have finished configuring schedules, click Save Changes.
13. When you have finished configuring the rule, click Save.
14. (Optional) To quickly view the scheduled times, click to select the schedule, and then click the View selected Rule Schedule icon ( ). Click outside the calendar to close it.

**Creating a Copy of an Existing Schedule**

To use an existing schedule as a starting point to create a new schedule:

1. Click to select the Rules tab.
2. Click to select the rule to edit.
3. Click the Edit the selected Rule icon ( ). The Edit Mode (right) panel is activated.
4. Click to select (highlight) the schedule to copy.
5. Click the Edit the selected Schedule icon ( ).
6. Click the Create a copy of the selected Schedule icon ( ).
7. In the Duplicate Schedule dialog box, enter a new value in the Display Name field. If you do not enter a new value, the schedule will be saved as [Original name] - Copy.
8. Click to select the radio button for the increments.
9. Click to select or deselect the checkbox for 24-Hr. Time.

10. Click and drag in the calendar to select the times.

11. Click to select or deselect the checkbox for Within limited date range, if you select Within limited date range, you must also select the Start on and End after values.

12. Click Add.

13. When you have finished configuring schedules, click Save Changes.

14. When you have finished configuring the rule, click Save.

15. (Optional) To quickly view the scheduled times, click to select the schedule, and then click the View selected Rule Schedule icon. Click outside the calendar to close it.

Editing an Existing Schedule

To edit an existing schedule:

1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon. The Edit Mode (right) panel is activated.

4. Click to select (highlight) the schedule to edit.

5. Click the Edit the selected Schedule icon.

6. (Optional) In the Edit the Schedule dialog box, enter a new value in the Display Name field. If you do not enter a new value, the schedule will be saved with the original name.

7. Click to select the radio button for the increments.

8. Click to select or deselect the checkbox for 24-Hr. Time.

9. Click or click and drag in the calendar to select the times.

10. Click to select or deselect the checkbox for Within limited date range, if you select Within limited date range, you must also select the Start on and End after values.

11. Click Save.

12. When you have finished configuring schedules, click Save Changes.

13. When you have finished configuring the rule, click Save.

14. (Optional) To quickly view the scheduled times, click to select the schedule, and then click the View selected Rule Schedule icon. Click outside the calendar to close it.

Deleting a Schedule

1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon. The Edit Mode (right) panel is activated.

4. Click to select the schedule to delete.

5. Click the Edit the selected Schedule icon.

6. In the Edit the Schedule dialog box, click to select the schedule to delete.
7. Click the Delete Schedule icon.
8. In the Delete Schedule confirmation dialog box, click Delete Schedule.
9. When you have finished configuring schedules, click Save Changes.
10. When you have finished configuring the rule, click Save.
11. (Optional) To quickly view the scheduled times, click to select the schedule, and then click the View selected Rule Schedule icon. Click outside the calendar to close it.

Managing Responses

Set one or more responses to the events in the rule.

Adding a Response

To add an entirely new response for a trigger:
1. Click to select the Rules tab.
2. Click to select the rule to edit.
3. Click the Edit the selected Rule icon. The Edit Mode (right) panel is activated.
4. In the Responses panel, click the edit icon to the right of then this will happen. The Edit the Responses triggered by Rule dialog box opens.
5. Click the Add a new Response icon.
6. Click to select an option from the Response Category drop-down menu.
7. Select the appropriate options requested in the dialog box. These will vary depending on the Response Category that you chose in the previous step.
8. (Optional) If you selected a response type that is not Custom Script, you can change it to a custom script. To do so, click Convert to Custom Script, and then click Convert in the confirmation dialog box. The name of the response is changed to Custom Script, and the code is displayed.
9. When you have finished configuring responses, click Save.
10. When you have finished configuring the rule, click Save.

Duplicating an Existing Response

To use an existing response as a starting point to create a new response:
1. Click to select the Rules tab.
2. Click to select the rule to edit.
3. Click the Edit the selected Rule icon. The Edit Mode (right) panel is activated.
4. In the Responses panel, click the edit icon to the right of then this will happen. The Edit the Responses triggered by Rule dialog box opens.
5. Click to select the response to duplicate.
6. Click the Duplicate the selected Response icon.
7. With the duplicate highlighted, select the appropriate options requested in the dialog box. These will vary depending on the Response Category of the response you duplicated.
8. (Optional) If you selected a response type that is not Custom Script, you can change it to a custom script. To do so, click Convert to Custom Script, and then click Convert in the confirmation dialog box. The name of the response is changed to Custom Script, and the code is displayed.

9. When you have finished configuring responses, click Save.

10. When you have finished configuring the rule, click Save.

Editing an Existing Response

To edit an existing response:

1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon 📝. The Edit Mode (right) panel is activated.

4. In the Responses panel, click the edit icon 📝 to the right of then this will happen. The Edit the Responses triggered by Rule dialog box opens.

5. Click to select the response to edit.

6. Select the appropriate options requested in the dialog box. These will vary depending on the Response Category.

7. (Optional) If you selected a response type that is not Custom Script, you can change it to a custom script. To do so, click Convert to Custom Script, and then click Convert in the confirmation dialog box. The name of the response is changed to Custom Script, and the code is displayed.

8. When you have finished configuring responses, click Save.

9. When you have finished configuring the rule, click Save.

Deleting a Response

To delete a response:

1. Click to select the Rules tab.

2. Click to select the rule to edit.

3. Click the Edit the selected Rule icon 📝. The Edit Mode (right) panel is activated.

4. In the Responses panel, click the edit icon 📝 to the right of then this will happen. The Edit the Responses triggered by Rule dialog box opens.

5. Click to select the response to delete.

6. Click the Delete the selected Response icon 🚫.

7. In the confirmation dialog box, click Delete.

8. When you have finished configuring responses, click Save.

9. When you have finished configuring the rule, click Save.

Configuring Recording

The Recording tab allows you to assign data sources (video and audio) to recorders within the VX System you have selected.
You can assign devices to recorders and create recording schedules through the Admin Portal (VideoXpert Enterprise only), VxToolbox, and VxStorage Portal; assigning data sources to a recorder without creating a schedule will prevent data sources from recording. You can perform advanced VxStorage configuration by connecting to the recorder using its IP address on port 9091.

**Configuring a Recorder**

1. Click the **Recording** tab.
2. Click **Recorders**.
3. Click to select the recorder to configure.
4. Click to expand **Recorder Configuration**, if available.
5. (Optional) To change the recorder name, enter a new value in the **Name** field.
6. (Optional) Under **Maximum Retention Period**, enter a number in the **Discard Video after [#] Days** field, either by typing in a value or selecting a value using the up and down arrows.
7. Click to select the radio button for the **Transmission Method** field: *Multicast* or *Unicast*.
8. Click to select the radio button for the **Stream to Record** field: *Primary*, *Secondary*, or *Primary+Secondary*.
9. Click **Save Changes**.

**Assigning Cameras to a Recorder**

The recorders and cameras you see in the **Recording** tab are relevant to the **VX System** you have selected.

1. Click the **Recording** tab.
2. Click **Recorders**.
3. Click to select the recorder to which you want to add or remove data sources. (Optional) Use filters to find the sources you want to add to the recorder.
4. Click to select the checkboxes for the devices you want to add to the recorder; click to deselect the checkboxes for the devices you want to remove from the recorder.

**Adding a Recording Group to a Recorder**

1. Click the **Recording** tab.
2. Click **Schedules**.
3. In the **Recording Groups** (left) panel, click the **Create a New Recording Group** icon ( ), or click to select a recording group similar to the one you will create, and then click the **Duplicate selected Recording Group** icon ( ).
4. Enter a value in the **Name of Recording Group** field of the **New Recording Group** dialog box.
5. Click to select the radio button for **All Resources** or **Selected Resources**.
6. If you selected **Selected Resources**, in the **Add / Remove Cameras from Group** table, click to select the checkboxes for the sources to include in the recording group; click to deselect the checkboxes for the sources to exclude from the recording group.
7. Click **Save**.

**Creating a Recording Schedule for a Recording Group**

1. If necessary, click the **Recording** tab, and then click **Schedules**.
2. In the **What to Record** (left) panel, click to select the recording group for which you want to create a recording schedule.

3. In the **Sources** (center) panel, click the **Edit the Recording Schedules** icon ( ) to open the **Select Schedules for Recording Group** window.

4. In the **Select Schedules for Recording Group** dialog box, click to select the checkboxes to build the schedule you want to apply to the recording group.

5. (Optional) To create and select a schedule that is not in the list:
   a. Click the **Add a New Schedule** icon ( ); or click the **Create a copy of the selected schedule** icon ( ) to start with a schedule that is close to what you want.
   b. Enter a value in the **Display Name** field.
   c. Click the appropriate radio button to the right of **Increments**, to select the available increments of time to record.
   d. Click to select or deselect the checkbox for **24-Hr. Time**. Deselecting the checkbox results in 12:00-11:59 AM and 12:00-11:59 PM recording timestamps.
   e. Indicate the times and days to record by clicking to select boxes corresponding to a days and times. You can also click and drag to select a contiguous range of times and days. Click to deselect any days and times that you do not want to record.
   f. (Optional) Click the checkbox to select **Within limited date range**, enter a date in the **Start on** and **End after** fields, either by selecting the dates from the calendars or by typing in a date using the mm/dd/yy format. You can deselect the checkbox to make the schedule unlimited by date.
   g. Click **Add**.
   h. In the **Select Schedules for Recording Group** dialog box, click to select the checkbox for the schedule you just created.

6. Click **Save Changes**.

   You can quickly view the recording schedule by clicking the **View selected Recording Schedule** icon ( ) at the bottom left corner of the panel.

7. Click to select one of the **Recording Schedules**.

8. Click the **Create a new Recording Behavior** icon ( ).

9. Click to select the radio button for either **Continuous Recording** or **Event-Triggered Recording (Full Frame Rate)**.

10. If you selected **Continuous Recording**, click to select the radio button for either **Full Frame Rate** or **Reduced Frame Rate**.

11. If you selected **Event-Triggered Recording (Full Frame Rate)**, in the **Start Full Frame Rate Recording on** table:
   a. Click to select the radio button for the type of event associated with the recording. Select an option in the **Associated Events** area or in the [camera] **Analytic Events** area.
   b. Select a value in the **Start** field either by typing-in a number or selecting one using the up and down arrows.
   c. In the **Stop Full Frame Rate Recordings on** table, click to select the radio button for **Timeout** or **No [analytic name]**, and then enter a value in the **Stop Recording** field, either be typing-in a number or selecting one using the up and down arrows.

12. Click **Add & Create Another** or **Add**.

13. If you clicked **Add & Create Another**, repeat steps 9-12.

14. Repeat steps 7-12 for each recording schedule created.

### Editing a Recording Group

1. Click the **Recording** tab.

2. Click **Schedules**.

3. In the **Recording Groups** (left) panel, click to select the recording group to edit.
4. Click the Edit selected Recording Group icon ( ) to open the Edit Recording Group window.
   a. (Optional) Enter a new value in the Name of Recording Group field.
   b. Click to select the radio button for All Resources or Selected Resources.
   c. If you selected Selected Resources, in the Add / Remove Cameras from Group table, click to select the checkboxes for the sources to include in the recording group; click to deselect the checkboxes for the sources to exclude from the recording group.
   d. Click Save.

**Editing a Recording Schedule**

1. Click the Recording tab.

2. Click Schedules.

3. In the Recording Groups (left) panel, click to select the recording group for which to configure the schedule.

4. (Optional) In the Sources (center) panel, click the Edit the Recording Schedule icon ( ).

5. In the Select Schedules for Recording Group dialog box, click to select and deselect the checkboxes for schedules to associate with the recording group.

6. (Optional) To create and select a schedule that is not in the list:
   a. Click the Add a New Schedule icon ( ); or click the Create a copy of the selected schedule icon ( ) to start with a schedule that is close to what you want.
   b. Enter a value in the Display Name field.
   c. Click the appropriate radio button to the right of Increments, to select the available increments of time to record.
   d. Click to select or deselect the checkbox for 24-Hr. Time. Deselecting the checkbox results in 12:00-11:59 AM and 12:00-11:59 PM recording timestamps.
   e. Indicate the times and days to record by clicking to select boxes corresponding to a days and times. You can also click and drag to select a contiguous range of times and days. Click to deselect any days and times that you do not want to record.
   f. (Optional) Click the checkbox to select Within limited date range, enter a date in the Start on and End after fields, either by selecting the dates from the calendars or by typing in a date using the mm/dd/yy format. You can deselect the checkbox to make the schedule unlimited by date.
   g. Click Add.
   h. In the Select Schedules for Recording Group dialog box, click to select the checkbox for the schedule you just created.

7. In the Schedules & Triggers for [recording group name] (right) panel, click to select an existing schedule.

8. Click the Edit Schedule icon ( ).

9. In the Edit Recording Schedule for dialog box, click to select the radio button for the Recording Mode and Triggers: Continuous Recording or Event-Triggered Recording (Full Frame Rate).

10. If you selected Continuous Recording, click to select the radio button for either Full Frame Rate or Reduced Frame Rate.

11. If you selected Event-Triggered Recording (Full Frame Rate), in the Start Full Frame Rate Recording on table:
   a. Click to select the radio button for the type of event associated with the recording. Select an option in the Associated Events area (Motion Detected or Alarm Active) or in the [camera] Analytic Events area.
   b. Select a value in the Start field either by typing in a number or selecting one using the up and down arrows.
   c. In the Stop Full Frame Rate Recordings on table, click to select the radio button for Timeout or No [analytic name], enter a value in the Stop Recording field, either by typing-in a number or selecting one using the up and down arrows.

12. Click Update.
Deleting a Recording Group

Deleting a Recording Group will also delete the associated Recording Schedules and Recording Behaviors.

1. Click the **Recording** tab.
2. Click **Schedules**.
3. Click to select the recording group to delete.
4. Click the **Delete selected Recording Group** icon ( ).
5. In the **Delete [recording group name]** dialog box, click **OK**.

Deleting a Recording Schedule

This will delete the selected **Recording Schedule**, including all associated **Recording Behaviors**.

1. Click the **Recording** tab.
2. Click **Schedules**.
3. In the **Recording Groups** (left) panel, click to select the recording group for which to delete the schedule.
4. In the **When to Record** (center) panel, click to select the schedule to delete.
5. At the bottom of the **When to Record** (center) panel, click the **Remove selected Recording Schedule** icon ( ).
6. In the **Remove Schedule from Recording Group** dialog box, click **Delete**.

Deleting a Recording Behavior (Trigger)

If you delete all **Recording Behaviors** for a **Recording Schedule**, the **Recording Schedule** is also deleted.

1. Click the **Recording** tab.
2. Click **Schedules**.
3. In the **Recording Groups** (left) panel, click to select the recording group for which to delete the trigger.
4. In the **Recording Behaviors** (right) panel, click to select the **Trigger** to delete.
5. At the bottom of the **Recording Behaviors** (right) panel, click the **Delete selected Recording Behavior** icon ( ).
6. In the **Delete [behavior name]** dialog box, click **OK**.
7. Repeat this procedure as necessary.

Licensing Your System

VideoXpert is licensed for the system, for upgrades, and by channel—the video streams you record. It comes with one (1) license to start, but you must license additional channels to view or record additional streams.

You can license the system automatically or manually.

- Manual licensing allows you to license a system that does not have an Internet connection.
- Automatic licensing requires your VideoXpert system to be connected to the Internet and have access to the Pelco licensing server.

VxToolbox allows you to apply licenses to various systems. For assistance, contact Pelco Product Support at 1-800-289-9100 (USA and Canada) or +1-559-292-1981 (international).
Manually Activating Licenses

For manual licensing, you must have your activation ID and a separate computer with access to the licensing server at http://licensing.pelco.com. During the manual licensing process, you will need to transfer your Licensing Request File to a computer with Internet access during the activation process. If you received multiple activation IDs for VideoXpert products, you must complete the process below for each individual activation ID.

As a part of the manual licensing process, you will download an Entitlement Request File and an Entitlement File; both files are specific to the product for which they were requested. It is recommended that you rename both files to reflect the system for which they are intended to prevent confusion during the licensing process.

1. Open VxToolbox and click the Licensing tab.
2. At the lower right corner of the Entitlements table (top panel), click the Add License icon ( ).
3. Enter your activation ID in the Activation ID box.
4. Click to deselect the checkbox to Automatically activate online.
5. Click Enter.
   - The Entitlement Pending status message appears at the top of the Entitlements table.
   - An entitlement named Pending will be listed in the table. At the far left of the Pending entitlement row will be two icons: Download a new request (.bin) file ( ) and Remove this activation ID ( ).
6. You will be prompted to save a request.bin file. Select a folder, (optional) type in a file name, and then click Save.
   An Entitlement Request File (named either what you typed in or the same name as the Activation ID) with a .bin extension is downloaded to your computer.
7. On a system connected to the Internet, open a new browser window or tab and go to the Pelco licensing server at http://licensing.pelco.com.
8. Under Login, click to select logging in With User Name, With Entitlement ID, or With Activation ID. You can also register as a New User.
9. Enter your credentials, and then click Login to access the Pelco licensing server.
10. Click the Manage Devices tab, and then click Generate License. The Entitlement File, named response.bin, will be downloaded to your computer. Copy the file and save it to the system on which you are hosting VxToolbox.
11. Return to the Licensing page within VxToolbox.
12. Click Choose file under the Entitlements section.
13. Select your Entitlement File (response.bin), and then click Open.
14. Click Import License File.
   When the process is complete, VxToolbox will display the installed license in the Entitlements table.

Automatically Activating Licenses

If your system has an active Internet connection with access to http://licensing.pelco.com, you can automatically activate licenses for your system.

1. Open VxToolbox and click the Licensing tab.
2. At the lower right corner of the Entitlements table (top panel), click the Add License icon ( ).
3. Enter your activation ID in the Activation ID box.
4. Click to select the checkbox to Automatically activate online.
5. Click **Enter**.
The system logs in to the Pelco licensing server and performs several tasks. Do not navigate away from this page until you see the **Add License** dialog box.

6. Click **OK**.
VxToolbox will display the installed license in the **Entitlements** table.

### Viewing the License Summary

Entitlements are associated with licenses. A license might be a consolidation of several entitlements.

1. Open VxToolbox and click the **Licensing** tab.

2. In the **License Summary** table (bottom panel), view the list of licenses. For each license:
   - The license **Name** is listed. Unactivated **Entitlements** are listed as one license with the name **Pending**.
     - The names in the **License Summary** table correspond to the names in the **Entitlements** table.
   - The **Total** column lists how many licenses and channels (sources) are included.
   - The **In Use** column identifies how many of the licenses and channels are in use.
   - The **Remaining** column identifies how many of the licenses and channels are not currently in use.

### Installing Entitlements After Restoring Your System

It is highly recommended that you back up your system and save the response file used to apply your initial entitlement.

- If restoring your system after uninstalling VideoXpert, you can re-apply your initial entitlement or license.
- If you re-image your system, you cannot apply your previous entitlement. If you have re-imaged your system, contact Pelco Product Support at 1-800-289-9100 (USA and Canada) or +1-559-292-1981 (international) for assistance.

### Managing Users and Roles

A role is a group of permissions defining abilities and responsibilities within a system. A user must be assigned at least one role to perform actions within the system.

### Understanding Internal and Restricted User Accounts

VideoXpert contains some hard-coded user accounts that are integral to the system. You cannot edit, disable, or delete these accounts, nor can you change roles or permissions for these users. You can, however, change the password for these accounts in the case of the admin and aggregator accounts, it is recommended that you change the password from the default.

<table>
<thead>
<tr>
<th>User</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>admin</td>
<td>This is the basic administrative user for VideoXpert. This user account possesses the “administrator” role is granted all available permissions within the system.</td>
</tr>
<tr>
<td>aggregator</td>
<td>(VideoXpert Enterprise only) This role is used internally by VideoXpert’s aggregation feature to communicate across sites.</td>
</tr>
</tbody>
</table>
Creating a Role

There are four default roles within VideoXpert:

- **Administrator** has full rights to the system.
- **Manager** has all Supervisor rights and the ability to configure recorders and devices within the system, including tags, recorder assignment, etc. Managers can also assign roles to users. (This role is available on VxPro Systems only.)
- **Supervisor** has advanced access to live and recorded video including investigations, PTZ control, and plug-ins. Supervisors can use plug-ins, configure events, and access workspaces configured by other users. (This role is available on VxPro Systems only.)
- **User** has basic rights to view live and recorded video. (This role is available on VxPro Systems only.)

Custom roles can also be created and assigned. To create a custom role:

1. Click the **Users** tab, and then click **Roles** at the top left of the window.
2. Click the **Add a new Role** icon (➕).
3. In the **Create a new Role on the VX System** dialog box, enter a value in the **Role Name** field.
4. (Optional) Add one or more permissions individually for the role:
   a. In the **Enabled Permissions** section of the window, click **Add a Permissions Category**.
   b. Click to select a permissions category from the available categories.
   c. Click to select the radio button to **Allow ALL [Category] Permissions** or **Allow Selected [category] Permissions**.
   d. If you selected **Allow Selected [Category] Permissions**, click **Add a Permission**; click to select a permission from the drop-down list (including **Select All [Category] Permissions**); if a confirmation dialog box opens, click **OK**.
   e. In the permissions table that is displayed beneath **Allow Selected [Category] Permissions** click the **Select Resource** icon (➕) to change the resource restrictions for the permission. In the **Manage Resource Restriction for** window, select **Match Parent Resources** (if present); **Allow All Resources**, **Allow Selected Resources**, and then select the resources to allow; or **Allow All Resources Except Selected**, and then select the resources to disallow.
   f. (Optional) To delete a permission from the category, click the **Delete** icon (🗑).
   g. (Optional) Click **Add Another Permission**, and repeat the process.
5. (Optional) Add all available permissions to the role:
   a. In the **Enabled Permissions** section of the window, click **Add a Permissions Category**.
   b. Click to select **Add All Categories**.
   c. Click to expand one of the categories, and then click the radio button to **Allow ALL [Category] Permissions** or **Allow Selected [category] Permissions**.
   d. If you selected **Allow Selected [Category] Permissions**, click **Add a Permission**; click to select the permission (including **Select All [category] Permissions**)
   e. In the permissions table that is displayed beneath **Allow Selected [Category] Permissions** click the **Select Resource** icon (➕) to change the resource restrictions for the permission. In the **Manage Resource Restriction for** window, select **Match Parent Resources** (if present); **Allow All Resources**, **Allow Selected Resources**, and then select the resources to allow; or **Allow All Resources Except Selected**, and then select the resources to disallow.

---

<table>
<thead>
<tr>
<th>User</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>internal</td>
<td>This role is used internally within the system to perform server-side tasks. It is not visible in the <strong>Users</strong> page, under the <strong>Users</strong> tab.</td>
</tr>
<tr>
<td>rule_engine</td>
<td>This role supports the rules engine.</td>
</tr>
<tr>
<td>snmp</td>
<td>This role is used to collect diagnostic information for the SNMP service that is available on the product.</td>
</tr>
</tbody>
</table>
**Parent Resources** (if present); **Allow All Resources, Allow Selected Resources**, and then select the resources to allow; or **Allow All Resources Except Selected**, and then select the resources to disallow.

The table provides the list of permission, resources allowed for each permission, and the number of devices that are allowed.

f. (Optional) To delete a permission from the category, click the **Delete** icon ( ).
g. Repeat steps c through f for each of the categories.

6. To delete a category from the **Enabled Permissions** area, click the **Delete** icon ( ) in the category title.

7. Click **Save**.

**Editing a Role**

Renaming a role does not affect the users to whom the role is assigned.

1. Click the **Users** tab, and then click **Roles** at the top left of the window.

2. Click the **Edit the selected Role** icon ( ).

3. In the **Edit the Role** dialog box, change the role name and/or permissions as needed.
   For detailed instructions, see the section titled *Creating a Role*.

4. Click **Save**.

**Duplicating a Role**

By default, a duplicate role retains the permissions of the original role. You can edit the permissions.

1. Click the **Users** tab, and then click **Roles** at the top left of the window.

2. Click to select the role to duplicate.

3. Click the **Create a copy of the selected Role** icon ( ).

4. Enter a name for the duplicated role and edit the permissions as needed.
   For detailed instructions, see the section titled *Creating a Role*.

5. Click **Save**.

**Deleting a Role**

1. Click the **Users** tab, and then click **Roles** at the top left of the window.

2. Click to select the role to delete.

3. Click the **Delete Role** icon ( ).

4. In the confirmation dialog box, click **Delete**.

**Viewing Details of a Role**

To quickly view the permissions assigned to a specific role:

1. Click the **Users** tab, and then click **Roles** at the top left of the window.

2. In the right panel, click to select the role to view.
3. In the Permissions of Role: [Role](right) panel, view the permissions for each category. If necessary, click to expand a permission category to view.

The information in the Permission of Role: [Role] panel is the same information displayed in the permission tables when you created or edited a role.

**Adding Users**

When adding users to the system, you give them a temporary password. Upon logging in for the first time, the system will require users to change their passwords.

You can also provide additional user information, to make it easier to associate user names with personnel; Name fields appear anywhere the system provides a user name.

1. Click the Users tab, and then click Users at the top left of the window.
2. Click the Create a new User icon ( ).
3. Enter a value in the Username field.
4. (Optional) Enter values in the First Name and Last Name fields.
5. Enter a value in the Password field.
6. Choose a Role for the user from the drop-down menu.
7. (Optional) Click Add another role, and then choose a role for the user from the drop-down menu.
8. (Optional) To delete a role, click the Remove this role from the selected user icon ( ). This option is only available if more than one role is assigned to the user.
9. (Optional) Enter a value in the User ID#, Phone, and Notes fields.
10. Click Add.

**Searching for Users**

1. Click the Users tab, and then click Users at the top left of the window.
2. Enter a value in the Search Users field.
   The search begins as soon as you enter the first character.; results are further refined as you enter more characters.
3. Add or delete characters to change the search results.
4. (Optional) To clear the search field, either delete all characters or click the Clear icon ( ) at the right of the Search Users field.

**Assigning Roles**

VideoXpert contains pre-defined roles that you can assign to users. You cannot change these roles but you can create new roles (see Creating a Role); each user must be assigned a role to use VideoXpert. Any locking features or competing actions performed by users are prioritized by user level.

To assign roles to an existing user:
1. Click the Users tab, and then click Users at the top left of the window.
2. Select the user to whom you are assigning a role, and then click the Edit the selected User icon ( ).
3. Select a Role from the drop-down menu.
4. (Optional) To add another role to the user, click Add another role, and then select a Role from the drop-down menu.
5. (Optional) If appropriate, edit additional user information from this dialog box. See sections titled **Editing a Role** and **Resetting Passwords**.

6. Click **Save**.

### Resetting Passwords

Users with appropriate permissions can either reset users’ passwords or force users to change their passwords.

Resetting a user’s password will allow you to grant the user a temporary password. Upon logging in, the system will require the user to change his or her password. You may want to reset a user’s password if a user does not remember his or her password, or the user is locked out of the system due to failed login attempts, or due to letting the password change timer lapse.

Users with appropriate permissions can also reset other users’ passwords and force users to change their passwords.

1. Click the **Users** tab, and then click **Users** at the top left of the window.

2. Select the user whose password you want to reset, and then click the **Edit the selected User** icon ( ).

3. Click **Change Password**

4. Enter a new value in the **New Password** and **Re-Enter New Password** fields.

   If you decide not to change the password, you must click **Do Not Change Password**, in order to continue.

5. (Optional) If appropriate, edit additional user information from this dialog box. See sections titled **Editing a Role** and **Assigning Roles**.

6. Click **Save**.

### Deleting Users

1. Click the **Users** tab, and then click **Users** at the top left of the window.

2. Click to select the user you want to remove.

3. Click the **Delete User** icon ( ).

4. In the confirmation dialog box, click **Delete** to confirm your selection.

### Using LDAP Authentication

You can configure VideoXpert to validate user credentials from an LDAP server; VideoXpert supports LDAP for Microsoft Active Directory. While the system can validate credentials over LDAP, you must create corresponding users within VideoXpert to validate credentials against. You must also assign roles and permissions through VideoXpert; there are no analogs for VideoXpert permissions in Active Directory or LDAP.

**NOTE:**

- After changing a password in an environment using LDAP authentication, a user’s old password may still work for a short period of time (less than one hour). This is a Windows NTLM authentication behavior, designed to allow accounts logged in to multiple computers or network services to access the network while the password change propagates.

- LDAP Authentication does not affect restricted system users. When LDAP is enabled, you can still change passwords for admin, aggregator, and rule_engine user accounts. (For VideoXpert Enterprise, this is done through the Admin Portal.) These accounts are authenticated by VideoXpert no matter how you authenticate other users.

While VideoXpert may support other LDAP authentication schemes, this guide focuses on -- and the product has been tested against -- two common methods for LDAP authentication: simple (single bind) and two-stage bind with a service account:
• Simple (single-bind) authentication, associates a user name and password with a distinguished name (DN) to validate user credentials.

• Two-stage bind authentication uses a service DN and a service DN password to establish the initial bind with the LDAP server. Upon a successful initial bind, a search is performed using the base DN, the first key from the Search Attributes box, and the user name. If the user’s information is found, the second bind is performed using the DN to authenticate user credentials.

Configuring LDAP Authentication

1. Click the **System** tab to access the **System** page.

2. Click **LDAP**, and then click to select the radio button for **LDAP**.

   **NOTE:** If you do not want LDAP Authentication, then click to select the radio button for **VideoXpert Authentication**, click **Save Settings**, and then skip the rest of this procedure.

3. Configure the following **Server** settings:

   a. Enter a **Path** for the server, and then click to select the checkbox for **SSL/TLS**, if appropriate.

   b. Enter a **Port**, if the LDAP server is not on the default port.

4. Configure the following **Authentication Directory** settings:

   a. For both Simple Search Authentication and Two-Stage Bind Authentication, enter a **Base DN**.

   b. For Two-Stage Bind Authentication only, enter a **Search DN** and a corresponding **Search DN Password**.

   c. For both Simple Search Authentication and Two-Stage Bind Authentication, enter a comma delimited string in **Search Attributes**.

      Valid search attributes are sAMAccountName and/or distinguishedName.

   d. Click **Test Connection** to ensure that the connection is valid.

5. When the connection test passes, click **Save Settings**.

6. (Optional) If you previously changed the LDAP settings, you can click **Revert** in the **Revert to Default?** dialog box, and then click **OK** in the **Revert to Default** confirmation dialog box.

Configuring General Settings

1. Click the **System** tab.
2. Click **General Settings**, and then specify the following:

- Under **VideoXpert System Name**, enter a value in the field.
- Enter a value in the **NTP Server Address** field.
- (Optional, only available on VideoXpert Enterprise systems) Specify a **Transmission Method** by clicking to select the appropriate radio button for the **Camera to Server** and **Server to Client** combination: Multicast, Multicast, Multicast, Unicast, or Unicast, Unicast.
- Click to select or deselect the checkbox for **Store exports in an alternate location**. If you select the checkbox, then enter values in the **Network Path**, **Username** *(if required)*, and **Password** *(if required)* fields.
- Under **Clip Lock Retention (Bookmarks)**, click to select the radio button for either **Keep Clips Locked**, or **Unlock Clips after [#] Days**, and then select the number of days either by typing in a value or using the up and down arrows.
- On VideoXpert Professional systems, under **Server Configuration**, specify the **RTSP Port** and **HTTPS Port**, either by typing a value in the field, or by using the up and down arrows.
- (Optional) Click **Show current certificate details** to view information including **Issued to**, **Issued by**, and **Period of Validity**. To close this field, click **Hide current certification details**.
- (Optional) On VideoXpert Professional systems, click **Export current certificate to .pfx**; enter the password in the **Authenticate Certificate** dialog box, **Password** field; click **OK**, in the **Select SSL/TLS Certificate** window, browse to the appropriate folder, enter a name for the file, and then click **Save**.
- (Optional) On VideoXpert Professional systems, click **Install New Certificate**, browse to and select the certificate, click **Open**, in the **Install SSL/TLS Certificate** dialog box, in the **Password** field, enter the password, and then click **OK**. Click **OK** again in the **Install SSL/TLS Certificate** confirmation dialog box.
- (Optional) To cancel any changes you have made before saving the settings, click **Revert** at the bottom of the panel.

3. Click **Save Settings**.

### Managing Events

From the Events tab, you can configure event details and notifications to ensure that the right users are notified when the system records a particular action or alarm.

### Finding and Filtering Events

Use filtering options to show the events relevant to you. Filters appear in the left-most panel of the Events tab and in some other tabs. Click the expand the **Filter** panel, and then do one or more of the following.

- Enter values in the **Filters Devices** field to filter by name, ID, model, IP address, serial number, vendor, or software version.
- Select an event **Category** from the pull-down menu.
- Select an event **Notification** from the pull-down menu.
- Enter a range in the **Severity** fields. To do so, either type in the severity to and from values, or select them using the up and down arrows.
- Select the event **Roles** from the pull-down menu.
- Click **Reset Filters** to clear the filters.

The events matching the filter criteria will be listed in the main panel.
Viewing and Configuring Event Details

1. Click the **Events** tab.

2. In the center panel, click to select the event you want to view or modify. You can use the filter, as described in the section titled *Finding and Filtering Events*.

3. Event details are shown in the right column. If necessary, click to expand **Event Details**.

4. To edit the event details settings, access the **Event Details for** dialog box by one of these methods:
   - In the right panel, click the edit icon (重要讲话图标) to the right of **Event Details**.
   - Right-click the event name, and then click **Edit Event Details**.

5. In the **Event Details for** dialog box, change event settings as necessary.
   - Click to select or deselect the checkbox for **Active** to determine whether VideoXpert will report the event. If you select **Active**, VideoXpert will report the event.
   - Click to select or deselect the **Use Custom Display Name**.
   - If you selected **Use Custom Display Name**, enter a name in the corresponding field. The **Custom Display Name** is how VideoXpert will represent the event.
   - Change the **Severity**, if necessary, either by typing a value in the **Severity** field, or by using the up and down arrows to select a value. The severity may help users determine whether or not they need to act on an event.

6. Click **Save Changes**.

Viewing and Configuring Event Notifications

1. Click the **Events** tab.

2. In the center panel, click to select the event you want to view or modify. You can use the filter, as described in the section titled *Finding and Filtering Events*.

3. Event notification settings are shown in the right column. If necessary, click to expand **Notification Settings**, and view the notification information.

4. To edit the event notification settings, access the **Notification Settings** dialog box by one of these methods:
   - In the right panel, click the edit icon (重要讲话图标) to the right of **Notification Settings**.
   - Right-click the event name, and then click **Edit Notification Settings**.

5. Click to select the radio box for the appropriate **Notification Type**.
6. If you selected **Pop-Up Banner**, configure these notification settings:
   a. Scroll to the bottom of the dialog box.
   b. Click the checkbox to select or deselect **Play Sound With Banner**.
   c. Select the radio button for either **Standard Chime** or **Custom Sound**. If you select **Custom Sound**, browse to the **Audio File**, and then click **Open**.
   d. Type or select a value for **Play Sound [#] times**.
   e. Type or select a value in the **Delay Sound Playback For [#] seconds between iterations** field.
   f. In the **Auto-Acknowledge After** area (automatically selected, and cannot be deselected), type or select a number, and then select a unit of time (for example, **Minutes**) from the drop-down menu.
   g. Click to select or deselect the checkbox for **Do Not Hide Cell Alerts**. Events associated with individual video sources provide alerts within VxOpsCenter cells; these alerts hide after three seconds. Select this option to prevent the alert from hiding.
   h. Click to select and deselect the checkboxes for the **User Roles to Notify**.

7. If you selected **Pop-Up Banner; Requires Acknowledgment**, configure these notification settings:
   a. Click the checkbox to select or deselect **Play Sound With Banner**.
   b. If you selected **Play Sound with Banner**, select the radio button for either **Standard Chime** or **Custom Sound**. If you select **Custom Sound**, browse to the **Audio File**, and then click **Open**.
   c. If you selected **Play Sound With Banner**, type or select a value for **Play Sound [#] times**.
   d. If you selected **Play Sound With Banner**, type or select a value in the **Delay Sound Playback For [#] seconds between iterations** field.
   e. (Optional) Click to select the checkbox for **Auto-Acknowledge After**, type or select a number, and then select a unit of time (for example, **Minutes**) from the drop-down menu.
   f. (Optional) Click to select the checkbox for **Allow Snooze (And Set Snooze Time)**, and then click the checkboxes to select and deselect the available intervals.
   g. Click to select or deselect the checkbox for **Do Not Hide Cell Alerts**. Events associated with individual video sources provide alerts within VxOpsCenter cells; these alerts hide after three seconds. Select this option to prevent the alert from hiding.
   h. Click to select and deselect the checkboxes for the **User Roles to Notify**.

8. If you selected **No Pop-Up Banner; Requires Acknowledgment**, configure these notification settings:
   a. Click the checkbox to select or deselect **Play Sound With Banner**.
   b. If you selected **Play Sound with Banner**, select the radio button for either **Standard Chime** or **Custom Sound**. If you select **Custom Sound**, browse to the **Audio File**, and then click **Open**.
   c. If you selected **Play Sound With Banner**, select a value for **Play Sound [#] times**.
   d. If you selected **Play Sound with Banner**, select a value in the **Delay Sound Playback For [#] seconds between iterations** field.
   e. (Optional) Click to select the checkbox for **Auto-Acknowledge After**, select a number either by typing in a value or using the up and down arrows, and then select a unit of time (for example, **Minutes**) from the drop-down menu.
   f. Click to select or deselect the checkbox for **Do Not Hide Cell Alerts**. Events associated with individual video sources provide alerts within VxOpsCenter cells; these alerts hide after three seconds. Select this option to prevent the alert from hiding.
   g. Click to select and deselect the checkboxes for the **User Roles to Notify**.

9. Click **Save Changes**.
Using Reports

From the Reports page, you can create and generate reports, and export them from the system. Reports are exported in CSV format.

Report Templates preloaded to VxToolbox are:

- Default Camera Report
- Default Event Report
- Default Recording Gap Report
- Default Role Report
- Default Camera Role Access Report
- Default Storage Report
- Default User Report
- Default user Action Report

You can edit an existing report template, or create a new one and edit the template details to include only the information needed.

Generating reports containing a large number of events might take some time. You can navigate away from the Reports page while the system generates your report. If your report parameters are too large, the request might time-out and the system might ask you to narrow your search.

Creating a Report Template

You can generate reports either manually or automatically from any of the templates in the Report Templates panel. Create a new template, as described here.

1. Click the Reports tab.

2. In the Report Templates list in the left panel:
   - To make a copy of an existing template, select the template, and then click the Create a copy of the selected Report Template icon. A new template (named the same as the original template - Copy) is added to the list.
   - To create a copy of an existing template, select the template, and then click the Save as New Template button at the lower left of the Template Details for [template name] window (upper left panel). In the Save New Template dialog box, enter a value in the Template Name field, and then click Save.
   - To start with a blank template, click the Create a new Report Template icon. A New Unsaved Template is added to the list.

3. Click to select the new report template.

4. If the Report Type drop-down menu is available, select from the report type.
   - The report type can only be selected if you started with a blank template; if you copied an existing template, the copy is assigned the same report type as the original.

5. If the Include [report type] (rows) field is displayed:
   - a. Click to select All or Selected from the drop-down menu.
   - b. If you clicked Selected, click the Select [report type] sources icon under the drop-down menu; in the Select [report type] window, click to select and deselect the appropriate options, and then click OK.

6. In the Include Info (columns) field, click to select and deselect the checkboxes for information to include in the report template. As you select and deselect this information, you can preview the report in the Column Preview for [report template name] panel in the (vertical) center of the window.
7. If the **Time Range** field is displayed, select an option from the drop-down menu.

8. (Optional) To generate a report for this template automatically:
   a. Click to select the checkbox for **Automatically Generate this Report**.
   b. From the drop-down menu below the option, select the day of the week on which the report will be generated.
   c. Type or select a time in the **at** field.
   d. (Optional) Click to select the checkbox for **Automatically Export to .csv**. If you select this, enter a **Network Path**, **User-name**, and **Password**. The user name and password are optional.

9. Click **Save**.

10. If the **Save New Template** dialog box is displayed, type a new name in the **Template Name** field, and then click **Save**.

**Editing a Report Template**

If appropriate, you can edit an existing template, as described here.

1. Click the **Reports** tab.

2. In the **Report Templates** list in the left panel, click to select the template to edit.

3. In the **Template Details for [template name]** (right) panel, make any changes needed to the template, except for the **Report Type**. The **Report Type** cannot be edited.

4. To save this over the existing template, click **Save template changes**.
   If you do not want to overwrite the existing template, you can click **Revert** to cancel the changes, or click **Save as new template** to save the settings as a new template.

**Deleting a Report Template**

If appropriate, delete a template, as described here.

1. Click the **Reports** tab.

2. In the **Report Templates** list in the left panel, click to select the template to delete.

3. Click the **Delete Template** icon ( )

4. In the confirmation dialog box, click **OK**.

**Generating a Report Manually**

Even if a report is generated automatically, you can generate the report manually, as needed.

1. Click the **Reports** tab.

2. In the **Report Templates** list in the left panel, click to select the report to generate.

3. In the **Column Preview for [report template name]** panel (vertical center of the window), at the right of the panel:
   a. Type a value in the **Name your report** field, or keep the default report name.
   b. Click **Generate Report**.
      The report is listed in the **Generated Reports** table at the bottom of the window.
**Exporting a Generated Report**

To export a report from the Generated Reports table:
1. Click the **Reports** tab.
2. In the *Generated Reports* table at the bottom of the window, click to select the report to export.
3. Click **Export to .csv**.
4. Browse to a file location and, if appropriate, type a new value in the *File name* field.
5. Click **Save**.

**Deleting a Generated Report**

To delete a report from the *Generated Reports* table:
1. Click the **Reports** tab.
2. In the *Generated Reports* table at the bottom of the window, click to select the report to delete.
3. Click the **Remove report file** icon.
4. In the confirmation dialog box, click **OK**.
Using VxPortal

VxPortal is a Web interface that enables you and other users to view live and recorded video from your VxPro system without using the hard VxOpsCenter client.

VideoXpert Portal requires Google Chrome 50+, Mozilla Firefox 50+, Microsoft Edge 14+, or Safari 600+ with Javascript enabled.

VxPortal operates as a simplified version of VxOpsCenter.

- To view cameras, simply double-click or drag them into the cell you want to view them in.
- Roll over a cell to engage playback controls.
- Change layouts, use filters, create bookmarks perform other operations as you would in VxOpsCenter. Refer to the chapter Using VxOpsCenter for instructions.

Accessing VxPortal

1. Launch VxPortal by one of the following methods:
   - Click the VxPortal icon on the desktop.
   - Open a web browser and go to the IP address of VxPortal (for example: https://[ip address of VxPro]).
2. Enter your Username and Password, and then click Log In.

Changing the System Password in VxPortal

For security purposes, you should change the default password for your system. To change it using VxPortal:
1. Click admin in the upper-right of the window to access the pull-down menu.
2. Click Change Password.
3. In the Change Password dialog box, enter the requested information in the fields, and then click Save.
Managing Exports

1. Click admin in the upper-right of the window to access the pull-down menu.
2. Click Manage Exports.
3. In the Export Archive window, view the list of exports in the table.
   - (Optional) Click on any column title (except Action), to sort by the values in that column.
   - (Optional) Click to expand Filter, and then do one of the following: enter a file name or creator; select From and To start and end dates and times; and/or select a Status to view a subset of all exports. Click Clear All to clear the filter fields.
4. (Optional) To download an Export Archive record, click Download in the Action column for the archive row, right-click the file name at the lower left corner of your monitor, click Open, click a location to which the record will be extracted, and then click Extract.
5. (Optional) To edit the export name, click the pencil icon ( ) in the Action column for the archive row; in the Edit Export Name dialog box, type a value in the New Name field, and then click Save.
6. (Optional) To delete an export, click the trashcan icon ( ) in the Action column for the archive row; in the confirmation dialog box, click to select or deselect the checkbox to Delete Permanently, and then click Yes.
   - If you did not select Delete Permanently, the archive is removed from the current list, and is added to the Export Trash Bin.
   - If you did select Delete Permanently, the archive is deleted, but not added to the Export Trash Bin.
7. If you want to view deleted exports, click the down arrow to the right of Export Archive, and then select View Trash Bin.
   - To move an export from the Export Trash Bin to the Export Archive window, click the export Restore button.
   - To delete one item in the Export Trash Bin, click the export Delete button. In the confirmation dialog box, the checkbox for Delete Permanently is already selected. Click Yes.
   - To delete the items in the Export Trash Bin, click the down arrow to the right of Export Trash Bin, and then click Empty Trash Bin. In the confirmation dialog box, the checkbox for Delete Permanently is already selected. Click Yes.
   - To return to the Export Archive window, click the down arrow to the right of Export Trash Bin, and then click Close Trash Bin.
8. If you want to delete failed exports, click the down arrow to the right of Export Archive, and then click Delete All Failed Exports. In the confirmation dialog box, click to select or deselect the checkbox for Delete Permanently, and then click Yes.
9. To exit the window, click the X in the upper-right corner of the window, or click outside the window.

Viewing Keyboard Shortcuts

To view a list of keyboard shortcuts for VxPortal:
1. Click admin in the upper-right of the window to access the pull-down menu.
2. Click Keyboard Shortcuts.
3. To exit the window, click the X in the upper-right corner of the window, or click outside the window.

Logging Out

To properly exit VxPortal:
1. Click admin in the upper-right of the window to access the pull-down menu.
2. Click Log Out.
Configuring Advanced Storage Using VideoXpert Storage Portal

VideoXpert Storage Portal provides advanced settings and status that can help you fine-tune and monitor your VideoXpert Storage devices.

Accessing the VideoXpert Storage Portal

1. Login to VxPortal.
2. In VxPortal, click admin in the upper-right of the window to access the pull-down menu.
3. Click Configure Server.
4. Enter the Username and Password, and then click Log In. The default Username and Password are both “admin”.

Checking VideoXpert Storage Status

The Status page provides basic status information about your storage/recorder to help you determine whether you are under-utilizing or over-burdening the recorder.
1. In VideoXpert Storage Portal, click the Status tab.
2. View the available information.

Generating and Downloading Storage Logs

Storage logs can provide insight to an anomaly with the recorder or one of the sources recording to it. When requesting support from Pelco, a Pelco technician may request logs from the recorder. To generate and download Storage logs:
1. In VideoXpert Storage Portal, click the Status tab.
2. Click Generate Log Archive.
3. In the Generate Logs dialog box, click Generate.
4. When the log has been successfully generated, click Download Log Archive (to the left of the Generate Log Archive button).
5. Open the zip file and then save it to an appropriate location.

Configuring the Server

Use the Configure page to assign an NTP address to the recorder. You should assign the recorder to the same NTP server as the rest of your VideoXpert network to ensure time is properly synchronized.

From this page, you can also change the transmission method and retention period for the recorder.
1. In VideoXpert Storage Portal, click the Configure tab.
2. Enter the IP address in the NTP Server field.
3. Enter an appropriate number of days in the Maximum Retention Period field.
4. In the Transmission Method field, click to select the radio button for Multicast or Unicast.
5. Click Save.
Backing Up and Restoring the Database

VideoXpert Storage takes database recovery points daily, and stores these points for eight days. You can also initiate a manual backup, an example of which is shown as Item 9 in the screen capture below. If your database enters an error state, you can restore to one of the available points from the Database page.

![Database Backup and Restore Screen Capture](image)

Restoring the Database

Restoring the database restores camera associations (provided the camera still exists within the VideoXpert environment) and storage settings. Restoring the database will not affect video directly; you will not lose video when restoring to an earlier time. However, if you have added cameras to the recorder after a backup was taken, and restore to that backup, you will lose access to video for any cameras the database restore process removes from the database.

**NOTE:** The NTP server address is not recovered during backup or restore. The NTP address must be reset manually after the backup or restore is complete.

1. In VideoXpert Storage Portal, click the Database tab.
2. In the table, locate the backup to be restored, and then click the corresponding Restore button.
3. In the confirmation dialog box, click Restore.
   Restoring can take several minutes, and there is no way to cancel a restoration that is in progress.
4. In the Backup from [identifier] confirmation dialog box, click Restore.
5. When the database has been restored, in the Attention dialog box, click OK.
6. In the VideoXpert Storage Portal login screen, enter the Username and Password, and then click Log In.

Manually Backing Up the Database

1. In VideoXpert Storage Portal, click the Database tab.
2. In the Database Tools area, click Create Database Backup.
3. In the Backup Database confirmation dialog box, click Backup.
   When the backup is complete, Completed Database Backup will be displayed in the Database Tools area of the window.
Using Volume Groups and Volumes

You can organize your device video storage by creating and managing Volumes and Volume Groups.

- **Volume**: a logical directory in which you want to store video.
- **Volume Group**: a group of volumes to which cameras are assigned and distributed. You can use volume groups to:
  - Separate types of storage (like internal vs. external)
  - Set different retention parameters for different sets of drives.
  - Write video to more than one volume. When all volumes are full, the system will overwrite volume containing the oldest stored video.

The system ships with a volume group called Default Volume Group. You can rename or delete this volume group.

- An archive volume group is a volume group to which the recorder will move the oldest video from the other volume groups, instead of deleting the oldest video. See Using External NAS Storage (Archive Volume Group) for more information about the archive volume group.

Using External NAS Storage (Archive Volume Group)

By connecting an external volume (network storage/NAS), you can extend your retention time for VideoXpert Storage recorders. When your VideoXpert Storage recorder achieves its maximum capacity and would normally begin to delete the oldest video, it will send video to the NAS instead. Video will still adhere to retention parameters, even when moved to external storage. The experience in accessing video is the same, whether a recording is served from a the VideoXpert Storage recorder or an external server.

**NOTE**: We support SMB1 NAS servers when using anonymous access. For systems that require a username/password for NAS access, you must use SMB2 or higher.

The external storage server must reside on the VideoXpert network. You can select whether to require login credentials. If the server requires and is provided login credentials, NAS Authentication is enabled.

As video transfers from a VideoXpert Storage recorder to an external storage server, bandwidth of your incoming cameras is equal to the bandwidth out to external storage. When using external storage, you should plan storage distribution to ensure bandwidth availability for incoming cameras, storage overflow, and user impact in viewing recorded video.

**NOTE**: While each VideoXpert Storage recorder can only have a single archive group, multiple VideoXpert Storage recorders can use the same NAS server. In this case each VideoXpert Storage must point to a different path/folder on the NAS server; pointing multiple VideoXpert Storage recorders to the same archive group network path will cause video to expire earlier than expected and without warning. You can individually select whether each path uses NAS Authentication.

Creating a New Volume Group

1. In VideoXpert Storage Portal, click the Volumes tab.
2. At the bottom right of the Volume Groups panel, click the plus sign icon.
3. In the Create New Volume Group dialog box:
   a. Enter a value in the Name field.
   b. Click to select or deselect the checkbox for Designate this Volume Group as the Archive Volume Group.
   c. Click OK.

Editing a Volume Group

1. In VideoXpert Storage Portal, click the Volumes tab.
2. At the bottom right of the Volume Groups panel, click the pencil icon.
3. In the *Edit Volume Group* dialog box:
   a. Enter a value in the *Name* field.
   b. Click to select or deselect the checkbox for *Designate this Volume Group as the Archive Volume Group*.
   c. Click *Save*.

4. If you selected this volume group to be the archive volume group, and there is already a designated archive volume group, the *Attention* dialog box will inform you of this, and instruct you to remove the current archive volume group. To proceed:
   a. Click *OK*
   b. Identify the current archive volume group by the *Archive Volume Group* icon to the left of the volume group name.
   c. Edit the existing archive volume group, and deselect the checkbox.
   d. Edit the appropriate volume group, and select the checkbox to set it as the *Archive Volume Group*.

**Deleting a Volume Group**

1. In VideoXpert Storage Portal, click the *Volumes* tab.
2. Click to select the volume group to be deleted.
3. At the bottom right of the *Volume Groups* panel, click the trashcan icon.
4. In the *Delete Volume Group* dialog box, click *OK*.
   If there is no designated archive volume group, the system will not archive video.

**Creating a New Volume**

1. In VideoXpert Storage Portal, click the *Volumes* tab.
2. In the Volume Groups panel, click to select a Volume Group to which the new Volume will be assigned.
3. At the bottom right of the *Volumes* (center) panel, click the plus sign icon.
4. In the *Create New Volume Group* dialog box:
   a. Enter a value in the *Path* field.
   b. Click to select or deselect the checkbox for *Requires credentials*. If you select this checkbox, enter values in the *Username*, *Password*, and *Domain* fields.
   c. Enter or select a value in the *Buffer Size* field.
   d. Click to select or deselect the checkbox for *Reserve bandwidth for this volume*.
   e. Click *OK*.

**Editing a Volume**

1. In VideoXpert Storage Portal, click the *Volumes* tab.
2. In the *Volumes* (center) panel, click to select the volume to edit.
3. At the bottom right of the *Volumes* panel, click the pencil icon.
4. In the *Edit Volume Path* dialog box:
   a. Enter a value in the *Path* field.
   b. Click to select or deselect the checkbox for *Requires credentials*. If you select this checkbox, enter values in the *Username*, *Password*, and *Domain* fields.
   c. Enter or select a value in the *Buffer Size* field.
   d. Click to select or deselect the checkbox for *Reserve bandwidth for this volume*.
   e. Click *Save*.

**Deleting a Volume**

1. In VideoXpert Storage Portal, click the *Volumes* tab.
2. Click to select the volume to be deleted.
3. At the bottom right of the *Volumes* panel, click the trashcan icon.
4. In the *Delete Volume* dialog box, click *OK*.

**Associating Devices With a Volume**

If you have more than one non-archive volume group, you can associated devices (cameras) with specific volume groups. This enables you to control data streams between the system and the volume groups.

1. In VideoXpert Storage Portal, click the *Volumes* tab.
2. In the *Volume Groups* (left) panel, click to select the volume group with which you will associate devices.
3. In the *Associated Devices* (right) panel, click the pencil icon.
4. In the *Edit Devices in Volume Group* “[group name]” dialog box, click to select or deselect the checkboxes for the devices to associate with the volume group, and then click *Save*.
5. (Optional) To show a subset of the devices in a volume group:
   a. In the *Volume Groups* (left) panel, click to select the volume group.
   b. In the *Associated Devices* (right) panel, in the *Filter* field, type in a value (for example “IP”).

**Viewing Storage Assignments**

You can check the status of individual streams and whether or not they are recording from the VideoXpert Storage Portal *Assignments* page.

1. In VideoXpert Storage Portal, click the *Assignments* tab.
2. In the *Recorders* (left) panel, click to select a recorder.
3. Scroll through the device list to see the *Name*, *ID*, *IP* address, and *Status* of each device.
4. Hover over a device name or ID to see the full text.

**Changing the Password**

1. In VideoXpert Storage Portal, in the upper right corner of the window, click *Change Password*.
2. Enter the current password, and new password in the appropriate fields.
3. Click *Change Password*. 
4. In the Success dialog box, click **OK**.

5. Login to VideoXpert Storage Portal using the new password.

---

**Logging Out**

To log out of VideoXpert Storage Portal, in the upper right corner of the window, click **Logout**.
Installing and Configuring VxOpsCenter

On VideoXpert Enterprise systems you must install VxOpsCenter. On both VideoXpert Enterprise and VideoXpert Professional systems, you must configure VxOpsCenter before use.

Installing VxOpsCenter (VideoXpert Enterprise only)

Your system must meet the minimum requirements and have Microsoft®.NET 4.6.1 or later installed before you can install the VxOpsCenter Client application.

1. Run the VxOpsCenter EXE installer.
2. Read and accept the terms of the End User License Agreement, and then click Next.
3. Click Begin Installation.
4. Follow the instructions in the Installation Wizard to complete the installation.
5. Click Close.

Running the Application for the First Time

When you run the application for the first time, you will create your user account, configure basic VxOpsCenter and video behaviors, and, most importantly, point VxOpsCenter to the VideoXpert system(s) you want to use. Some steps in initial setup are optional; you only need to access these options if your workstation and network differ from default settings. The general work flow is as follows:

1. Run VxOpsCenter.
2. Create your Workstation Configuration account.
   - This account is local to the workstation and preserves your configuration and your VideoXpert system credentials from other users who might access your workstation.
   - Your workstation configuration account credentials may be the same as your VideoXpert user credentials, though you may want to use different credentials for your workstation configuration account to maximize security.
3. Configure your workstation, including your monitor layout. See Setting Up Your Workstation.
5. Indicate whether or not to allow multi-system access. See Enabling or Disabling Multi-System Access (Simultaneous Server Connections).
6. Login to VideoXpert with your standard credentials (not the Workstation Configuration credentials) to begin using VideoXpert.
Setting Up Your Workstation

Workstation settings determine the basic behavior of the system. You can re-configure the workstation at any time.

1. In the VxOpsCenter Login window, from the Connect to System drop-down menu, select None - Configure Workstation; enter values in the Username and Password fields; and then click Log In.

2. If the Workstation Configuration dialog box does not open, or to update the configuration later, launch the Workstation Configuration dialog box: In Mission Control, click the User Menu icon ( ), and then select Configure Workstation.

3. Enter a Workstation Name. This is the name by which VxCore will recognize the workstation and the name by which other users will recognize the workstation when sending video, responding to workstation-related events, etc.

4. Enter values in the Username and Password fields under Vx Workstation Account.

5. Under, Workstation Mode, select Normal or Shared Display mode. Shared Display mode provides monitor-wall functionality for a workstation operating a single monitor. See Configuring Shared Display Mode for more information about Shared Display mode.

6. For VideoXpert Enterprise systems only, if your workstation will support multiple monitors through VxDecoder, click the Configure Monitors icon ( ) to the right of Monitor Configuration to open the Monitor Configuration window for the workstation. See Configuring Monitors for VideoXpert Workstations to learn more about monitor configuration.

7. Enter your NTP Server Address.

8. (Optional) click the checkbox to select or deselect Enable hardware acceleration. Hardware acceleration is enabled by default and should only be disabled if your workstation uses an unsupported graphics chipset, or if you need to troubleshoot graphics issues that may result from your graphics drivers and chipset.

9. Click Apply, OK, or VX System Connections to save your workstation configuration settings. If you clicked VX System Connections, see Configuring VX System Connections.
Configuring Monitors for VideoXpert Workstations (VideoXpert Enterprise Only)

The VxOpsCenter supports monitors connected directly or monitors connected through Enhanced Decoders over the network for VideoXpert Enterprise workstations. For best performance, it is recommended that you run Windows® 8 or later on workstations operating decoder-driven monitors.

For workstations using multiple monitors driven by Enhanced Decoders, TightVNC server mirrors Windows elements on the monitors that are driven by Enhanced Decoders over the network. Video decoding processes are handled by the decoders driving each monitor, but the user experiences what appears to be a single, unified Windows desktop.

1. Log in using the Workstation Configuration Account.
2. In Mission Control, click the User Menu icon ( ), and then select Configure Workstation.
3. Select Configure Monitors. If you have already performed initial configuration for the system, log in as the VxOpsCenter local administrator first, and then select Configure Monitors.
4. For each monitor:
   a. Click to select the monitor.
   b. Click to select the radio button for either Direct or Decoder.
   c. If you selected Decoder, enter the IP address of the decoder, and then click Connect.
   d. (Optional) Assign a number to the monitor. To do so: enter a number in the VxSystem Monitor Number field, and then click to select or deselect the checkbox for Auto-accept all shared video streams and views. When Auto-accept all shared video streams and views is selected, the monitor will automatically accept video streams and views that have been sent by

![Figure 1: Connecting Monitors to Enhanced Decoders](image)
another workstation or shared display; when it is not selected, a user must manually accept shared video streams and views on the monitor.

The example above shows the assigned monitor number (32) in the lower right corner of the monitor.

NOTE: Pelco recommends that you assign a unique number to each monitor (workstations and shared displays). This enables you to send camera streams to the monitors.

5. When you have configured all monitors, click Done.

Configuring VX System Connections

The list of VX System Connections determines the VideoXpert environments to which your VxOpsCenter can connect. When users log in with their VideoXpert system credentials, VxOpsCenter will connect them to relevant VideoXpert environments. If a server is not in the list of system server connections, users will not be able to connect to it using VxOpsCenter.

Only the Workstation Configuration account can define system server connections. When you add systems using the Workstation Configuration account, and you are working in MSA mode, you can elect to provide credentials. If you add credentials for systems, then your Workstation Configuration account will also immediately connect you with your systems. If you do not provide credentials, then you must manually enter credentials for each system after you log in as the workstation configuration user. If you are using Single Server Access mode (non-MSA mode), you must always provide the credentials when logging in.

When setting up a connection to a server, you can determine streaming performance to the system. By default, system connections use the best possible streaming options, but you may need to disable settings or adjust your connection speed to account for the network between the workstation and the system to which you will connect. See Understanding System Streaming Performance Settings.

NOTE: To optimize decoder performance in Windows 7, download and install the DFMirage mirror driver. Do not install the DFMirage driver if running a version of Windows other than Windows 7.

Enabling or Disabling Multi-System Access (Simultaneous Server Connections)

Multi-system access allows you to access multiple VideoXpert environments simultaneously using your Workstation Configuration account. When enabled, your Workstation Configuration account will store credentials for your VX systems, acting like a master key for VideoXpert (on this workstation). When you log in with your Workstation Configuration account, you will be able to select and access video from all of your VX systems without having to provide credentials for each of your systems.

NOTE: The multi-system access option takes effect whether or not you have configured the workstation to connect to multiple systems.

To enable multi-system access:

1. Select the system to which you will connect; to log in as the Workstation Configuration User, you must select None - Configure Workstation.

2. Log into VxOpsCenter with the Workstation Configuration credentials.

3. In Mission Control, click the User Menu icon ( ), and then select Configure Workstation

4. Click VX System Connections.

5. Click to select or deselect the checkbox for Enable simultaneous access to multiple systems. When you select this checkbox, the Multi-System Access Login dialog box opens. Click OK to acknowledge the information and close the dialog box.

With multi-system access enabled, the Systems section is available within VxOpsCenter. You can select or deselect systems to show or hide sources belonging to your various systems.

If the Enable simultaneous access to multiple systems setting is disabled, before you log in, you must select the system to which you will connect; to log in with the Workstation Configuration credentials, you must select None - Configure Workstation.
Adding Servers to VxOpsCenter

1. Log into VxOpsCenter with the Workstation Configuration Account.
2. In Mission Control, click the User Menu icon ( ), and then select Configure Workstation.
3. Click VX System Connections.
4. If there is an existing system list, import it.
   a. Click the menu icon ( ) at the lower left of the Workstation Configuration window.
   b. Click Import System List.
   c. Click Browse, and then select the appropriate file.
   d. Review the information in the Import System List window, and make any changes, as appropriate. For example, you can select a new file to import, and choose to either replace the list or merge lists (add new systems to one or more existing system lists).
   e. Click Import.
5. To add another server:
   a. Click the Add System Connection icon ( ) at the lower right of the Workstation Configuration window.
   b. (Optional) Provide notes about the server. The notes are only available to the Workstation Configuration account.
   c. Provide the IP of the server in the IP Address field, and adjust the HTTPS Port value if different from the default.
   e. (Optional) Click to select or deselect the checkbox for Validate SSL/TLS Certificate...
   f. Click Test Connection to ensure that you have provided the correct server address; testing the connection will require you to provide credentials to the server.
   g. Click Save.
6. If you want to export the System List:
   a. Click the menu icon ( ) at the lower left of the Workstation Configuration window.
   b. Click Export System List.
   c. In the Export System List window, enter a value in the System List File Name field,
   d. In the To Location field, click Browse and browse to the location to which the file will be saved.
   e. (Optional) Click to select Include Username & Password for each System.
   f. Click Save.

7. When you have added all appropriate connections, click OK.

8. If the Log Out Required dialog box opens, click OK. You will be logged out. The configuration changes are applied when you log back in.

Editing a System Connection

1. Log into VxOpsCenter with the Workstation Configuration Account.
2. In Mission Control, click the User Menu icon ( ), and then select Configure Workstation.
3. Click VX System Connections.
4. Click to select the system connection to be edited.
5. Click the Edit System Connection icon ( ) at the lower right of the Workstation Configuration dialog box.
6. In the Configure System Connection dialog box, make all necessary updates, and then click Save.
7. In the Workstation Configuration dialog box, click OK to save the settings.
8. If the Log Out Required dialog box opens, click OK. You will be logged out. The configuration changes are applied when you log back in.

Deleting a System Connection

1. Log into VxOpsCenter with the Workstation Configuration Account.
2. In Mission Control, click the User Menu icon ( ), and then select Configure Workstation.
3. Click VX System Connections.
4. Click to select the system connection to be deleted.
5. Click the Delete System Connection icon ( ) at the lower right of the window to delete the connection to the server.
6. In the Delete System Server Connection dialog box, click OK to confirm the deletion.
7. In the Workstation Configuration window, click OK to save the settings.
8. If the Log Out Required dialog box opens, click OK. You will be logged out. The configuration changes are applied when you log back in.

Understanding System Streaming Performance Settings

System streaming performance settings determine the quality of streams you receive or, in some cases, whether you receive a stream at all from a particular system. These settings affect frame rate and latency of video, typically for the better with each subsequent setting. However, these options may not be available for your network. VxOpsCenter uses the deepest selected option that is provided by the server.
If you deselect all Streaming Performance options, you will engage JPEG Pull streaming. JPEG Pull streaming is always available and works on virtually all network types (anywhere a TCP connection is available). It works even on slow connections, in part because of its lower quality (low frame rate and high latency).

To set the **System Streaming Performance**, log in with the Workstation Configuration account and add or edit a system.

- **Allow RTSP/RTP** is recommended for most system configurations. Select this to enable RTSP streaming over TCP (or Unicast or Multicast UDP, depending on subsequent settings). This option provides a higher quality stream than JPEG Pull on all but the slowest networks.

- **Allow UDP** is recommended for most LAN configurations. This setting enables Unicast streaming over UDP. Streaming over UDP is more efficient and has lower latency than streaming over TCP. However, UDP traffic is blocked by some WAN networks, and by fewer LAN networks. If you encounter streaming problems, try deselecting it.

- **Allow Multicast** is recommended for most enterprise-level networks whose switches allow multicast traffic. This setting enables Multicast streaming over UDP. Multicast UDP streaming is even more efficient than unicast UDP streaming. However, multicast traffic is blocked by most WAN networks, and by some LAN networks.

- **Connection Speed** determines the type and resolution of video available to you; at slower connection speeds, you will receive video transcoded into lower resolutions. When streaming JPEGs, your connection speed determines the compression of JPEG images (the lower the speed, the greater the compression).
  - 512k restricts you to JPEG streaming.
  - 1 Mbps restricts video to CIF resolution (352 x 240) or smaller.
  - 5 Mbps restricts video to D1 resolution (720 x 480) or smaller.
  - 10 Mbps restricts video to secondary streams when available.
  - Connection speeds greater than 10 Mbps can access full resolution video. Options are 50 Mbps, 100 Mbps, 1 Gbps, and 10 Gbps.

### Configuring Shared Display Mode

A **Shared Display** is a single-monitor workstation that provides monitor wall functionality within VideoXpert. In this mode, local controls are disabled; you will not control the application locally. Rather, you and other users will send tabs and video to the shared display and control the shared display remotely.

Your workstation must have only one, locally-connected monitor to support Shared Display mode. (If more than one monitor is connected to the workstation, you will be unable to put the workstation into Shared Display mode.) Putting the VxOpsCenter in Shared Display mode causes the VxOpsCenter application to start and log-in automatically when Windows starts. Because the workstation is intended to start without user interaction, it is recommended that you configure Windows to start and log-in automatically for shared displays.

The user account you provide when setting up Shared Display mode must have the **Setup Edge Devices** permission. The account should also have rights to view and control any cameras you send to the monitor; the shared display cannot display cameras it does not have permission to access, even if the user sending something to the shared display has permission to view those cameras.

**NOTE:** Shared display is not available if multi-system access is enabled.

To configure an VxOpsCenter for Shared Display mode:

1. If you have not already done so access the **Configure Workstation** window:
   a. Log into VxOpsCenter with the Workstation Configuration account.
   a. In Mission Control, click the **User Menu** icon ( ), and then select **Configure Workstation**.
2. Click the **Workstation Settings** tab.
3. In the **Workstation Mode** section of the window, click to select the checkbox for **Shared Display**.

4. Provide a number for the monitor. The number will allow you to set rules to send video to your shared display, or to send video to the shared display by number.

5. (Optional) Enter or select a **VX System** to create a VideoXpert Connection. Selecting this option opens a dialog to configure system server connections. See Configuring VX System Connections.

6. Provide the user name and password of an account with credentials to view video; the account provided must have access to cameras and functions you want to use through the shared monitor.

7. (Optional) Click the checkbox to select or deselect **Show camera names and timestamps in video cells**. Whether the user sharing video has names and timestamps enabled, the shared display uses this preference to determine whether or not to display overlays.

8. (Optional) Click the checkbox to select or deselect the **Show Shared Display title bars**.

9. In the **Aspect Ratio** area, click to select the radio button to either **Maintain video aspect ratios** or **Stretch video to fill the cells**. If you select **Stretch video to fill the cells**, an option appears that allows you to collapse space between cells.

10. Click **Save**.

---

**Logging In**

1. Open the VxOpsCenter application.

2. Enter your credentials.
3. (Optional) If VxOpsCenter is configured to connect to a single system at a time, select the system you want to access. See *Understanding User Account Types*.

4. Click **Log In**.

**Understanding User Account Types**

VxOpsCenter supports two types of users:

- The Workstation Configuration account provides access to VxOpsCenter settings and allows you to configure connections to VX systems. The configuration account should be reserved for administrators, especially if multiple users will share the same workstation.

- Logging in as a standard VX system user provides access to standard VX features - viewing video, controlling cameras, etc.

  **NOTE:** If multi-system access is enabled, only Workstation Configuration accounts are supported.

If your user account is both the Workstation Configuration account and a VX system user, VxOpsCenter will log you into applicable VX systems and allow access to workstation configuration settings.

When you log in as a standard VX system user, the system will only populate sources and options you have permissions to see (determined by the roles assigned to your user account). If a system or camera does not appear when you log in, then the system or camera might be offline, or you might lack the appropriate permissions.

**Setting Your Display Language**

The localization presented by the VxOpsCenter client is based on the Region and Language settings within Windows.

  **NOTE:** You must have the appropriate Windows language pack to expose display languages in the VxOpsCenter Client.

To set or change your VxOpsCenter display language:

1. Close the VxOpsCenter software if it is already running.

2. Click **Start** (if necessary), and then search for and click to open **Region & language settings**.

3. In the **Languages** area, if the appropriate language is not present, click **Add a language**. Follow the prompts to add the appropriate language.

4. In the **Languages** area, click on the appropriate language, then click **Set as default**.

5. Close the **Settings** window.

6. Run the VxOpsCenter Client.

**Changing Your Workstation Account Password**

1. Log into VxOpsCenter with the Workstation Configuration Account.

2. In Mission Control, click the **User Menu** icon ( ), and then select **Configure Workstation**.

3. Click **Workstation Settings**.

4. In the **VX Workstation Account** area, in the **Password** field, enter a new password.

5. Click **Apply**.

6. Click **OK**.
Using the VxOpsCenter Interface

1. **Mission Control** contains settings, and all the items with which you may populate workspaces.

2. The **Views** panel provides access to **Tab Layouts, Saved Tabs, and Workspaces**. Your workspace consists of tabs and monitors populated with cameras or plug-ins. You may have one active workspace at a time containing some number of tabs (typically one tab per monitor, but that is not a limitation); each tab contains some number of video streams or plug-ins.

3. The **Content** panel provides access to the **Sources** tab, which shows all the video sources that the current user can access. Use the filters in the panel to sort the list in real time. It also provides access to the **Plug-ins** tab, which contains content and overlay plug-ins. **Content** plug-ins consume a cell, like the **Mapping** or **Image Viewer** plug-ins. **Overlay** plug-ins operate in the same cell as video, providing additional information about the video in question.

4. The **Bookmarks** panel shows clips of video that you or other users have bookmarked. Use the filters in the panel to sort the list in real time.

5. The **Select Grid Layout** controls determine the number of cells in a tab.

6. A **Tab** is a window of the VxOpsCenter containing cells.

7. A **Cell** displays a single camera or plug-in within VideoXpert. Cell highlights determine whether a cell is selected, playing-back video, or is in PTZ mode.

8. **Playback Controls** and the timeline apply in a selected cell applies to that cell only.

9. **Playback Controls** and the timeline at the bottom of the tab applies to all synchronized cells within the tab.

10. **Synchronous Play** enables you to select cells for which playback is synchronized.

11. **Tooltips** show additional information about your video sources. Hover over entries in the **Sources** and **Bookmarks** panels to reveal tooltips.
Adding Quick Access Icons to Mission Control

Quick access to frequently used tools are provided in Mission Control, just above the Views panel. They can be added and removed. To add or remove the quick access icons:

1. In Mission Control, right-click in the space above Views.
2. Click to select (to add) or deselect (to remove) a tools icon.
3. Repeat these steps to add or remove another tools icon.

Using Context Menus

You can right-click entries in the source list or cameras in your active workspace to reveal additional options available to your user and the devices you want to use. VxOpsCenter provides users with only the options available to you at any given time; availability may be limited by factors including your user permissions, the types of cameras you use, and whether or not PTZ mode is engaged. Options include the following.

- **Send To** enables you to choose a view to send (a saved tab, saved investigation, or workspace), a destination for the view, and whether to force acceptance of the sent view. See the section titled Sending Views to Users, Workstations, or Shared Displays.
- **Edit Source** enables you to assign the selected source a new name or number. See the section titled Editing the Name or Number of a Source.
- **Manage Tags** shows you what tags are assigned to the selected camera(s), system, and folders; and lets you filter which tags to show. See the section titled Managing Tags.
- **Open Camera Configuration in Browser** opens the camera Web UI, and enables you to login and make changes to the camera configuration. Refer to the camera Operations Manual.
- **Open in VxToolbox** opens VxToolbox to the corresponding system, and highlights the source in the Devices (center) panel. Refer to the VxToolbox User Guide (for VideoXpert Enterprise systems) or to the VxToolbox section of the VideoXpert Professional User Guide.
- **Rotate** lets you select the default rotation, 180 degrees, or plus or minus 90 degrees. See Rotating the Camera.
- **Toggle Statistics** displays or hides camera statistics including such things as bitrates, mode, source, and call-up time. See Displaying Statistics.
- **Analytics Overlay**, available on some Pelco cameras, can be set to Show Simple-Motion Data or Show Analytics Drawing Data. See the section titled Using Analytics Overlays.
- **Home Preset** returns the camera to the home position. See the section titled Executing PTZ Presets and Patterns.
• **Presets** lets you select an existing preset position, edit an existing preset position, and create a new preset position. See the section titled *Executing PTZ Presets and Patterns*.

• **Pattern** enables you to run an existing pattern. Patterns must be created on the camera. Refer to the camera *Operations Manual*.

• **Refresh Presets and Patterns** retrieves the list of presets and patterns from the camera. It does not overwrite or delete any patterns created from VxOpsCenter.

• **Send Preset Number** will send a preset to a specified cell in a specified monitor; and can display the data source, jump to a specified time, and trigger a preset. See *Sending Cells to Shared Displays*.

• **Search Recordings for Motion (Pixel Search)** allows you to quickly find search for motion in a camera recording. See *Using Pixel Search*.

**Using Tooltips**

Hover over any bookmark in a cell or in the *Bookmarks* panel to reveal additional information about the bookmark. This information might include:

• The name of the bookmark

• The date and time at the middle of the bookmark recording time

• The start date and time of the bookmark

• An image from the recorded bookmark

Hover over any source in the *Sources* panel to reveal additional information about the source, including:

• The time stamp for the information

• The name of the source

• The current image of the source corresponding to the time stamp

• Whether or not the camera is *Online*, *On Screen*, and *Recording*, and whether PTZ is locked (if the camera has PTZ).

• *Watched by* information

• *Tags* associated with the source (if any)

• Technical *Details* such as: whether or not there is camera storage, the IP address, the camera ID, the target location for recording (if any), the camera model, the camera serial number, and the camera software version

Click on *View* to display the source in a cell.

**Using Watched By**

If you have the “Multiview” permission, you will see a *Watched by* field in tooltips throughout the VxOpsCenter interface. The *Watched by* field shows users watching live video from a particular video source; the *Watched by* field does not show users playing back video recorded from a video source.

If the users listed in the *Watched by* field are viewing video from a different site than you, the tooltip will also attempt to indicate the site from which other users are watching video. If users are watching video from an aggregated site, the tooltip will state the site name in parenthesis. If you are watching video from an aggregated site, and the users listed in the *Watched by* field are accessing VideoXpert from the Aggregation (parent) site, then the tooltip will simply list *parent site*.
Setting User Preferences

When logged in to VideoXpert, you can set some basic preferences for behaviors within the VxOpsCenter application. To access the Preferences window:

1. In Mission Control, click the User Menu icon ( ).
2. Click Preferences.

The Preferences window opens.

Updating General Settings

1. In Mission Control, click the User Menu icon ( ).
2. Click Preferences.
3. In the Preferences window, click General.
4. (Optional) Click Reset Tips and Warnings, and then click OK in the Reset Warnings confirmation window.
5. (Optional) Click Change Password, enter new values in the fields, and then click Set Password.
6. (Optional) Click to select the checkbox to enable Display system time and date in the window footer.
7. Click Done to exit the Preferences window.

Updating Mission Control Settings

1. In Mission Control, click the User Menu icon ( ).
2. Click Preferences.
3. In the Preferences window, click Mission Control.

4. (Optional) Click to select and deselect radio buttons in the When double-clicking a source... area, to control how a source is opened.

5. (Optional) Click the checkbox to select or deselect Allow docking Mission Control via drag-and-drop.

6. (Optional) Click the checkbox to select or deselect Highlight source of the selected cell in the source list. If you select this option, you can also select Automatically scroll source list to reveal highlighted source.

7. (Optional) Click the checkbox to select or deselect Show video thumbnails on hover in the source list.

8. Click Done to exit the Preferences window.

Updating Cells Settings

1. In Mission Control, click the User Menu icon ( ).

2. Click Preferences.

3. In the Preferences window, click Cells.

4. (Optional) Click to select or deselect the checkbox for Always show source names in videos. If you select this option, you can also select Show overlay behind persistent source names in videos.

5. (Optional) Click to select or deselect the checkbox for Display “Live” rather than timestamp in cell when showing live video.

6. (Optional) Click to select or deselect the checkbox for Automatically enter PTZ mode upon loading source in cell.

7. (Optional) Click to select or deselect the checkbox for Display in-cell feedback for playback controls.

8. (Optional) Click to select or deselect the checkbox for Collapse space (gutters) between cells.

9. (Optional) Click to select or deselect the checkbox for Display timestamp above timeline playhead.

10. (Optional) In the When placing multiple cameras area, click to select the radio button for Replace video content and create new tabs as needed or Only fill empty cells and create new tabs as needed.

11. (Optional) In the When playing back over a low-bandwidth connection: area, click to select the radio button for Decrease frame-rate to match the network capability or Play at full frame-rate, but stop playback to buffer as needed.

12. (Optional) In the When creating snapshots area:
   a. Click to select the radio button for JPG or PNG.
   b. Click the checkbox to select or deselect Show overlays on snapshot.
   c. Click to select or deselect the checkbox for Auto-save snapshots. If you select it, the to folder field is displayed. Browse to and select the folder.

13. (Optional) Click to select or deselect the checkbox for Automatically play audio when available.
    - If you selected it, click to select the radio button for From selected cell only or From all visible cells.
    - If you deselected it, From selected cell only is selected, and From all visible cells is not available.

14. (Optional) In the Video aspect ratio area, click to select the radio button for Maintain video aspect ratios or Stretch video to fit cells.

15. Click Done to exit the Preferences window.

Updating Popups and Dialogs Settings

1. In Mission Control, click the User Menu icon ( ).
2. Click Preferences.
3. In the Preferences window, click Popups and Dialogs.
4. Click to select or deselected the checkbox for Sort alerts by severity level instead of timestamp.
5. Click Done to exit the Preferences window.

Using Tabs and Workspaces

A workspace is comprised of tabs; each tab consists of a layout populated with sources and plug-ins. You can save your entire workspace or individual tabs for easy access later. Users with appropriate permissions can even make their workspaces or tabs arrangements available to other users. The server automatically saves your workspace when you log out, and recalls it when you log in again.

Using Tab View Options and Modes

For each tab, use the Mode and View menus to control the display.

Configuring Tab View Options

To update view options for a tab, select the tab (in the image above, the tab is named LinkedPTZ), click View, and then select one or more of the following options:

- (Optional) Select whether to display the tab in Full Screen mode—the tab controls and outer borders vanish, maximizing the size of video and cells.
- (Optional) Set the Max Video Quality within the tab. Unless the tab is in collaborative mode, video quality settings affect video locally; they will not determine the behavior of a tab displayed on another user’s workspace or a shared display, nor do they affect the quality of recorded video.
  - Highest Available Quality sets the tab to behave normally; it will display the camera’s primary stream when possible, as dictated by cell size and system resources.
  - Secondary Stream forces the tab to display secondary streams for all cameras.
  - D1 (720 x 480) displays video at 720 x 480 resolution.
  - SIF (352 x 240) displays video at 352 x 240 resolution.
  - JPEG Stream sets the tab to have all streams transcoded into JPEG frames. The rate of the JPEG stream is dependent on network bandwidth and Media Gateway availability; this setting can be stressful on your Media Gateway.
  - Thumbnail sets the tab to images that refresh roughly every 30 seconds, rather than video. This mode uses few resources and significantly reduces the impact of the tab on your workstation. Use this mode for large areas in which a low frame rate is still enough to capture activity within the scene.
  - No Video prevents the tab from displaying video locally. Use this mode when controlling a tab on a monitor wall, so that the tab has little or no impact on your local workstation resources.
- Click to select either Stretch video to fit cells or Maintain video aspect ratios.
- Click to select either Collapse space between cells or Show space between cells.
Changing Tab Modes

Tab modes determine the features available to you within a tab. Changing tab modes without saving the current tab will cause you to lose your settings. Modes are exclusive; for example: a tab cannot support a sequencing mode and also the collaborative mode. Putting the tab in either mode will remove the abilities granted by the previous mode. To change the mode, click **Mode**, and then click to select one of these options:

- **Normal** mode sets the tab to behave normally.
- **Collaborative** mode allows you and other users to view and affect changes in the tab simultaneously; use this mode to collaborate with other users.
  - Collaborative tabs do not support plug-ins and are not available when multi-server access is enabled.
  - Collaborative tabs are always global tabs; you cannot restrict the users who have access to the collaborative tab.
  - Tabs marked with the **Collaborative Tab** icon ( ) are collaborative, and allow multiple users to view and affect changes in the tab simultaneously. User commands against the collaborative tab are performed on a first-come, first-served basis. Users should account for latency and the total number of collaborative users when affecting the tab to coordinate efforts.
- **Live Sequence** mode allows you to add more cameras to a tab than the layout would traditionally support, and to rotate cameras through the tab at a particular interval.
- **Alarm Sequence** mode allows you to designate cameras that you want to watch only when a meaningful event occurs.

Creating a New Tab

Creating a tab allows you to recall the complete tab, including all cameras, viewing states (live or recorded video), and plug-ins. Save tabs that you or other users will recall frequently.

1. Select a layout for a new tab by one of the following methods.
   - At the top of the workspace, to the right of all open tabs, click the **New Tab** icon ( ), and select a layout for your new tab.
   - In Mission Control, in the **Views** panel, click **Tab Layouts**, and then click to select a layout.

2. Populate the tab with sources or plug-ins. Use the filter function, if necessary, in Mission Control to find cameras to add to your workspace:
   a. Click **Filter** to expand the view.
   b. Type a value in the **Filter by** field.
   c. Double-click a source or drag it to an empty cell.
   **NOTE:** You can also drag cells to rearrange your workspace.

3. While viewing the tab to be saved, click **File** at the upper left corner of the window, and then click **Save As**.

4. Enter the following information:
   - A **Name** for the tab.
   - (Optional) Select a keyboard **Shortcut**.
   - (Optional) To make the tab available to all users in the VideoXpert environment, click to select the checkbox for **Save as global tab**.
   - (Optional) To make the tab globally available, and allow multiple users to view and simultaneously manipulate the contents of the tab, click **Save as collaborative tab**.

5. Click **Save**.
Opening a Saved Tab

To open a saved tab:
1. In the Mission Control, click to expand the Views area.
2. Click Saved Tabs.
3. Double-click the tab you want to open, or drag a tab into the monitor in which you want it to open.

Updating an Existing Tab

You can make changes to an existing tab and then save the changes.
1. In the tab you wish to update, make all necessary changes.
2. Click File at the upper left corner of the window, and then click Save.

Changing Tab Layouts

The grid icon in any tab shows your current layout. Click it to select a new layout option. If you select a layout with fewer cells than your current layout, the client will retain camera-cell assignments and repopulate cells accordingly if you return to the original layout or a layout with more cells than the original.
1. Select the tab to be changed, or open a new tab.
2. Do one of the following:
   - Click the Select Grid Layout menu next to the grid icon in the top right of the tab task bar.
   - In Mission Control, under Views, click Tab Layouts.
3. Select the new layout for the tab.
4. (Optional) Click File, click Save As, update information in the Save Tab As dialog box, and then click Save.

Editing the Metadata of an Existing Tab

To edit the name, hotkey, or description for tabs:
1. In Mission Control, under Views, click Saved Tabs.
2. Click to select the tab to edit, and then click the Edit Tab icon.
3. In the Edit Tab dialog box, edit the values as appropriate.
4. When complete, click Save.

Creating a New Workspace

Creating a workspace allows you to recall the complete workspace, including all cameras, viewing states (live or recorded video), and plug-ins. Save workspaces that you or other users will recall frequently.
1. In Mission Control, in the Views panel, click Workspaces.
2. Double-click or click and drag to open an existing workspace that is similar to the one you are creating.
3. To delete tabs from the workspace, click the X at the right of each tab that you do not want (to close the tab). Leave at least one tab open.
4. Make appropriate changes to each remaining tab, if necessary.
5. Add more tabs, as appropriate, using one of the following methods:
   - To add a new tab, see Creating a New Tab.
   - To add an existing tab: in Mission Control, under Views, click Saved Tabs, and then double-click the tab name.

6. Make any other changes to the workspace. For example: undock, dock, or move Mission Control; change the mode; or change the view.

7. Save the new workspace:
   a. Click the Save Workspace As icon.
   b. Enter a value in the Name field.
   c. (Optional) Select a value in the Shortcut field from the drop-down menu.
   d. (Optional) To make the workspace available to all users in the VideoXpert environment, click to select the checkbox for Save as global workspace.
   e. Click Save.

Opening a Saved Workspace

Opening a saved workspace will close your current workspace; you can save your current workspace before you open a new one. If you set a shortcut for a saved item, you can also recall it using keyboard shortcuts. To open a saved workspace:

1. In Mission Control, click to expand the Views area.
2. Click Workspaces.
3. Double-click the workspace you want to open, or drag a workspace into the monitor in which you want it to open.
4. If the Recall a saved workspace dialog box opens, click to select Keep Open Windows or Close Your Open Windows.

Updating a Saved Workspace

1. In Mission Control, in the Views panel, click Workspaces.
2. Select the workspace to update.
3. To delete tabs from the workspace, click the X at the right of each tab that you do not want (to close the tab).
4. Make appropriate changes to each remaining tab, if necessary.
5. Add more tabs, as appropriate, using one of the following methods:
   - To add a new tab, see Creating a New Tab.
   - To add an existing tab: in Mission Control, under Views, click Saved Tabs, and then double-click the tab name.
6. Make any other changes to the workspace. For example: undock, dock, or move Mission Control; change the mode; or change the view.
7. If this is not a global workspace, or if you have permission to edit/update the workspace, save the updated workspace:
   a. Click the Save Workspace icon.
   b. In the Save Workspace confirmation dialog box, click Save.

Edit the Metadata of an Existing Workspace

You can edit the name or shortcut of a workspace, or change whether it is saved as a global workspace at any time.

1. In Mission Control, under Views, click Workspaces.
2. Click to select the workspace to edit and then click the *Edit Workspaces* icon (edith).  
3. In the *Edit Workspace* dialog box, make any needed changes, and then click *Save*.  

### Deleting a Saved Tab from the System  
1. In Mission Control, under *Views*, click *Saved Tabs*.  
2. Do one of the following:  
   - Click to select the tab, and then click the *Delete Tab* icon ( ).  
   - Right-click the tab, and then click *Delete Tab*.  
3. In the *Delete Tab* dialog box, click *OK*.  

### Deleting a Workspace from the System  
1. In Mission Control, under *Views*, click *Workspaces*.  
2. Do one of the following:  
   - Click *Workspaces*, click to select the workspace, and then click the *Delete Workspace* icon ( ).  
   - Right-click the workspace, and then click *Delete Workspace*.  
3. In the *Delete Workspace* dialog box, click *OK*.  

### Sending Views to Workstations or Shared Displays  
You can send cameras or tabs to other workstations or shared displays (destinations) in your VideoXpert network using *View Launcher* or *Quick Launch*.  

#### Using View Launcher to Send Views to Workstations or Shared Displays  
To use the *View Launcher* to send cameras or tabs to other workstations or shared displays in your VideoXpert network:  
1. Open *View Launcher* using one of the following methods:  
   - Click *File* in the tab, and then select *Send To*.  

---

65
In Mission Control, click the User Menu icon ( ), and then select View Launcher.

To send an individual source, right click the source (in either the active cell or in the Sources list), and then select Send To.

2. Use the drop-down menu to select the View that you want to send if it is not already selected.

3. Use the drop-down menu under Add a Destination to select destination for the view you want to send; destinations marked by 📢 are shared displays. You can select multiple destinations. When you have added all appropriate destinations, click outside the drop-down menu.

4. (Optional) To clear the destination list, click Clear.

5. (Optional) Select Force Acceptance to automatically launch the view in the active window of the destination.
   The destination user might have to manually accept the view you send, the destination might be set to accept the view automatically, or you can force the destination to accept the view.

6. Click Launch.
   The disposition of the sent view is listed in the Status column.

### Using Quick Launch to Send Cells to Workstations or Shared Displays

**NOTE:** The Quick Launch dialog box has other functionality, which is explained in the tasks associated with those functions.

To use the quick launch feature, your shared displays must be assigned numbers. See the section titled Configuring Shared Display Mode.

1. To access Quick Launch, (optional) click the cell to be sent, and then press the Insert key.
2. (Optional) If you are sending the currently streaming camera (you clicked to select the cell to be sent), put the camera in the mode you would like to send. That is, you can leave the camera in live mode, select playback mode, and select a specific time in the recording to begin playback. When the cell is sent, the destination will appear as you set it now.

3. In the black box at the center of the dialog box:
   - Enter enter the target monitor number and then m to indicate the destination
   - (Optional) Enter the target cell number and then c. If you want the stream to appear in the 1st cell of the destination, you do not have to specify the cell number.
   - If you want to specify a source other than a currently streaming camera in which you have clicked before opening Quick Launch, enter the camera number. If you specify the camera number, the destination will receive the cell in live mode.

Entering 6m3c222 would send camera 222 to cell 3 of monitor 6; entering 6m would send the currently selected camera to cell 1 of monitor 6.

4. Click the Call Up Camera icon or press the Enter key.

5. To close the Quick Launch dialog box, click the Cancel icon.

Watching Video

The Sources section of Mission Control shows the list of video and audio sources you are authorized to access.

If a particular source is online but does not appear in your source list, try refreshing the list. Cameras that come online after you log in or perform a search will not appear until you refresh the list. If the camera still does not appear, request access to the source from your administrator.

When watching live video, cells 1/4 the size of the tab or larger will use the primary stream from a video source. Cells smaller than 1/4 the size the tab will use the secondary video stream. In a 2x2 layout, for example, all cells will use the primary stream. In a 1+12 tab, the largest cell will use the primary stream and the other twelve will use the secondary stream.

When watching recorded video, cells 1/4 the size of the tab or larger will display full-framerate video. Cells smaller than 1/4 the size of the tab will playback only iFrames.

1. In Mission Control, click Content, and then click Sources.

2. Find the camera you want to watch. To use the Filter to search for cameras:
   a. Click Filter to expand the filter panel.
   b. Type a value in the Filter by field or select a saved filter from the Advanced Filter Options drop-down menu.

To save a filter, under Advanced Filter Options, in the Advanced Filter Options drop-down menu, click Save Filter.

3. Add the camera to your workspace.
   - Drag a camera to the cell in which you want it to appear.
   - Double-click a camera to add it to the next available cell in the current tab.

Understanding Cell Borders

The color of the inner and outer border of a cell indicates the status of the cell.

- A white outer border indicated that the cell is active (selected); a black outer border indicates that the cell is not active.
- A white inner border indicates that the cell is in live mode.
- A yellow inner border indicates that the cell is in playback mode.
Rotating the Camera

You can rotate the view of PTZ cameras. To do so:
1. Right-click in the cell in which the camera is streaming, and then click Rotate.
2. Click to select one of the following options:
   - Maintain the Default Rotation
   - Rotate 90°
   - Rotate 180°
   - Rotate -90°

Viewing Analytics Overlays

Pelco’s Sarix cameras provide for an overlay of analytics on live and recorded video that can be displayed in VxOpsCenter. The two types of analytics overlays are:

- Show Simple-Motion Data, which shows a red-tinted shape overlaying the video where motion is present.
- Show Analytics Drawing Data, which shows lines, boxes, and text to track areas of motion within the scene.

The overlays are configured at the camera level. Configuration parameters include the type of overlay that is enabled (one, both, or neither), the shape of each overlay in the overlay type, and sensitivity to motion. Refer to the Operations Manual for the camera to configure analytics overlays.

Analytics overlays can be enabled on a per-cell basis. That is, you can have more than one cell streaming video for the same camera, and set each cell to display (or not display) different analytics.

To view an analytics overlay in a cell:
1. Open the Sarix camera in a cell.
2. Right-click the cell, and then click to select Analytics Overlay.
3. Click to select Show Simple-Motion Data or Show Analytics Drawing Data. A check mark is displayed to the left of the option you select, indicating that the overlay is enabled.
4. If appropriate, repeat the two previous steps and select the other overlay.
5. (Optional) To disable an analytics overlay, perform the steps above, but click to deselect the overlay(s) that you do not want to display.

Enabling and Disabling Audio

Video sources marked with a small blue dot ( ) are associated with an audio source. In any cell containing or associated with an audio source, click the Mute/Unmute icon ( ) to enable or disable audio within a cell; you can control volume through Windows’ standard audio controls.

To change the audio preferences on one or more cells:
1. In Mission Control, click the User Menu icon ( ), and then click Preferences.
2. In the Preferences dialog box, click Cells.
3. Click to select or deselect the checkbox for *Automatically play audio when available*.

4. Click to select *From selected cell only* or *From all visible cells*.

5. Click *Done*.

**Expanding a Cell to Full-Screen**

In the source cell, double-click the cell or click the *View Video in Full-Screen* icon to expand a cell to the full-screen. Click the same icon, now labeled *Exit Full Screen*, or press the Esc key to exit full-screen mode.

**Watching Recorded Video With VideoXpert**

Users with sufficient permissions can access recorded video from any video source in a workspace. Placing the pointer on a cell containing a source with recorded video will reveal playback controls.

1. Place your cursor over the cell containing the source with recordings that you want to watch.

2. Navigate to the date and time in the recording that you want to view using one of the following methods:
   - Click the *Jump to Specific Date/Time* icon and then specify or select the date and time.
   - Click in the cell with the recording to playback, enter a value in military time (for example: for 9:45PM, enter 2145). As you do this, the *Quick Launch* dialog box opens. When the time is displayed in the black box at the center of the *Quick Launch* dialog box, click the *Jump to Time* icon.
   - Click at the appropriate spot in the timeline to quickly navigate to a different time in the recording. Green areas on the timeline represent recorded video.

3. Use the playback controls to direct video playback.

4. Click the *Jump to Now* icon to jump to live video.

**Watching Recorded Video with Edge Storage**

If your camera or video source is recording video locally (using a micro SD card or in concert with ONVIF Profile G), the timeline will display the local storage icon; the device tooltip will also alert you to multiple recording locations. Click the local storage icon to open an investigation tab showing the camera’s various recording locations as separate timelines.

You cannot view video while it is stored on the camera; you must push video from the camera to a VideoXpert Storage recorder, to view video stored on a camera. See Using Investigations to View Video Stored on a Camera’s Local Storage.

**Using Pixel Search (VideoXpert Professional Only)**

Pixel Search enables you to quickly access motion detection events on a specific camera for a selected range of time in a recording.

1. For the specific camera (one at a time) that has the events you want to view, ensure that you have set the Motion Detection analytic, *Detect Motion* setting to *On Server* in VxToolbox. See *VxToolbox User Guide* for instructions.

2. Display the camera in a cell in VxOpsCenter; expand the cell, if appropriate.

3. Right-click the cell, and select *Search Recordings for Motion (Pixel Search)*.

4. In the dialog box, click to select the checkbox for *Don’t show again* (if appropriate), and then click *OK*. 
5. In the grid that now overlays the camera view in the cell, select one or more zones (squares) in the grid, using one of these methods:
   - Click to select a single zone.
   - Click and drag to select multiple adjoining zones in a rectangular pattern.
   - Hold down the Shift key on your keyboard, and click to select each zone. These do not need to be adjoining zones.
   - Hold down the Shift key on your keyboard, click individual zones, and click and drag to also select groups of adjoining zones.
   - To clear the selected zones, click the Clear Selected Zones icon at the upper left of the cell.
   - To search in the zones that you did not choose, instead of the zones you chose, click the Invert Selected Zones icon at the upper left of the cell.

6. To select a different date and time range than what is currently selected, click the edit icon at the upper right corner of the cell, to the right of the date range; in the Set Time Range window, select a start date, start time, end date, and end time; and then click Set.
   The length of time included in the default time range is based on the current time bar selection. For example, if 1hr is selected in the time bar drop-down menu at the bottom of the workspace, then one hour will be the default time included in the search range.

7. (Optional) To cancel exit the Pixel Search, click the Cancel icon at the upper left of the cell.

8. In the upper right of the cell, click Search.
   - The first event (chronologically) plays immediately.
   - Clips with motion events detected are indicated by blue bars in the timeline in the playback controls area.
   - The blue pixel search bars are half-height; motion is full-height.
   - To jump to the next event, click the Alt key, and then click the Next Clip icon in the playback controls area.
   - To jump to any event, select an event from the Jump to Event drop-down menu at the top of the window, or click the blue bar associated with the event in the playback controls area.

9. When finished, click Done in the top right corner of the window.

Creating Bookmarks

When watching recorded video, you can implement a bookmarks to note a moment in video to reference later. Bookmarks appear in a section in Mission Control, and are global resources; all users can see the bookmarks you create. Within Mission Control, bookmarks behave like cameras; you can add a bookmark to a tab or workspace to recall the portion of video captured by the bookmark.

1. While watching a recorded video, click the Create Bookmark icon.
2. Provide a Title for the bookmark. The title can be searched within Mission Control.
3. (Optional) Enter information in the Notes field.
4. (Optional) Apply a lock to segments of video/audio recordings, called clips, to prevent them from being deleted unless they are purposely unlocked. To do so:
   a. Click to select the checkbox for Lock Video.
   b. Use the date and time selectors to set the start and end parameters for the lock.
5. Click Save.

Finding and Recalling Bookmarks

Bookmarks behave like any other camera or video source. Adding a bookmark to a workspace adds the camera to the workspace in playback mode, paused at the date and time specified by the bookmark.
1. Click Bookmarks in Mission Control to expand bookmark resources.

2. Use the filters to search for a bookmark. The list of results only displays the source, date, and time for the bookmark in question, but you can also search by the plain-text note attached to the bookmark. Hover the cursor over a bookmark to get more information about it.

3. Add the bookmark to a workspace.

4. To see the lock on the timeline, scroll to a time within the lock, and notice the white bar at the top of the timeline, with arrows pointing down to indicate the start and stop times.

**Editing, Unlocking, and Deleting Bookmarks**

Select a bookmark in Mission Control and click the Edit Bookmark icon to edit the plain text for the bookmark, or to lock or unlock the bookmark. You cannot change the date, time, or camera.

Select a bookmark in Mission Control and then click the Delete Bookmark icon.

**Synchronizing Video Playback**

You can synchronize playback across multiple cells within a tab to provide different perspectives for a single recording event.

1. Click Sync in the tab containing the cells you want to synchronize.

2. Select the cells you want to synchronize; select Sync All to select all cells in the tab.

3. If necessary, click the Play icon to playback video. Cells will remain synchronized until you click Sync again, even if you jump to live video and re-engage playback.
   
   - When using sync playback on any of your current monitors, click the Activate Synchronous Play for This Cell icon in the bottom left corner of the tab to add a tab to the sync group. The icon turns yellow when the cell is added to a sync group. The controls in any monitor belonging to the sync group will affect playback for all cells and tabs in the group.
   
   - Click the Add to Multi-Tab Sync Group icon to add cells in a tab to the global sync group.
   
   - If you want to add individual cells in a monitor to the global sync group, click Sync to open the Select Cells for Synchronized Playback box, select the cells you want to add to the group, and then click Sync.
   
   - To remove a cell from the group, click the Deactivate Synchronous Play for this Cell icon. The icon returns to white when it is removed from a sync group.

**Creating a Live Sequence Mode**

A video sequence, indicated by the sequence symbol, is a series of cameras set to rotate through a tab at a user-defined period of time. When you configure a sequence, you can determine which cameras appear in the sequence; how often the cameras rotate; and whether or not to rotate an entire set of cameras, or just one at a time. A sequence may be helpful when you have more locations to track than you have monitors or attention.
To create a sequence:

1. In any tab, click **Mode** and select **Live Sequence**.

2. Set the **Dwell Time** period. This is the length of time that the tab will dwell on cameras before advancing to the next camera(s) in the sequence.

3. Set the **Replacement Method**. This determines how many cameras you want to replace at the end of each dwell period: all of the cameras in the grid, or one camera at a time. When replacing a single camera at a time, the cameras rotate through the grid, left-to-right, top-to-bottom. (The next camera in the sequence moves into the top-left cell; the camera formerly in the top-left cell moves to the right, and so on. The bottom-right cell is bumped off the grid, until it re-enters the sequence.)

4. Add cameras to the **Live Sequence**.
   a. To the right of **Cameras in the Sequence**, click the edit icon ( ) to enter the **Edit Mode**.
   b. Either double-click cameras, or drag cameras into the **Cameras in the Sequence** box.

5. Click **Save**.

6. Click **Resume Sequence**.

**Creating an Alarm Sequence Mode**

Alarm Sequence mode, indicated by the alarm symbol ( ), allows you to designate cameras that you want to watch only when meaningful events occur, so that you never miss activity relevant to your surveillance operations.

By default, the sequence will any camera-associated events that have been configured to provide a notification for your user account and role. You can refine the sequence to a subset of system cameras and a subset of camera-associated events that you want to watch.
To create an alarm sequence:

1. In any tab, click **Mode** and then click **Alarm Sequence**.

![Image](image_url)

2. If the **Tab Mode Change Confirmation** dialog box opens, click **OK**.

3. Type in a value or select a value using the up and down arrows for **Dwell time when available cells are full**. This indicates how quickly video rotates through the sequence when you have more current events than available cells in the sequence.

4. (Optional) In the **Include these events** area, click to select the radio button for **Selected Events** if you only want to use a subset of events in your sequence, click the **Edit** icon ( ), click to select or deselect checkboxes for the **Event Types** to include, and then click **Save**, otherwise, leave the **All relevant events** radio button selected.

5. (Optional) In the **Cameras in the Sequence** area, click to select the radio button for **Selected Cameras** if you want the sequence to follow a specific subset of cameras, and then drag cameras into the sequence (the order does not matter for alarm sequences); otherwise, leave the **All Cameras** radio button selected.

6. (Optional) In the **Auto Close Stream** area, click to select the radio button for **After a specific period**, and then enter or select the time period; otherwise, leave the **When the event is acknowledged** radio button checked.

7. Click **Resume Sequence** to run the sequence.

### Editing Sequences

Click the **Edit** icon ( ) to edit the cameras, events, and other settings belonging to a sequence.

You do not need to pause the sequence to edit the cameras in the sequence.

### Pausing and Resuming Sequences

Click **Pause Sequence** to stop cameras from rotating in or out of the sequence. The cameras in the tab will continue to play until you resume the sequence.

### Setting up Snapshots

You can automatically save snapshots in a folder of your choosing.

1. In Mission Control, click the **User Menu** icon ( ), select **Preferences**, and click **Cells** to find snapshot options.
2. In the *When creating snapshots* area:
   a. Click to select the radio button for either *JPG* or *PNG* in the *Use format* field.
   b. Click to select or deselect the checkbox for *Show overlays on snapshot*.
   c. Click to select or deselect the checkbox for *Auto-save snapshots*. If you select this feature, click *Browse* and select the folder in which you want to save snapshots.

3. Click *Done*.

**Taking Snapshots**

1. Click the *Take Snapshot* icon ( ) to take a snapshot of the current frame.
2. If you have not set up a location for saved snapshots, provide a location and file name for the snapshot.
3. Click *Save*.

**Displaying Statistics**

Right-click any cell and select *Toggle Statistics* to display camera statistics over live video in the pane. Right-click the cell and select *Toggle Statistics* again to hide the information.

**Viewing and Filtering Sources**

In Mission Control, click to expand *Content*, and then click the *Sources* tab to see a list of all video and audio sources that you are authorized to access.

- Click to expand the *Filter* area, and use it to shorten the list of sources.
  - Enter a Source Name, Model, Number or IP address in the *Filter by* field.
  - In the *Advanced Filter Options* field, select a filter from the *Save and Recall Source List Filter Sets* pull-down menu.
  - Click to expand *Advanced Filter Options* to reveal additional options; you can find cameras by *Tags*, whether they are *Online*, whether they are *Recording*, whether they are *On Screen*, and whether they are equipped with *Storage*.
    When you use two or more tags, the filter will find only those sources that have all of the tags assigned to them.

- To find a filter, click to expand *Advanced Filter Options*, click *Saved Filter Sets*, and then click the appropriate filter.
- To save a filter, click to expand *Advanced Filter Options*, populate the filter, click *Saved Filter Sets*, and then click *Save Filter*.
- To toggle between the *Folder View* and the *Video Sources view*, click the *Show Folder View* icon ( ) or the *Show List View* icon ( ), whichever is visible. These are located at the far right of the window, below the *Filter*.

See *Managing Tags* to create and manage folders.

**Managing Tags**

The *Manage Tags* window enables you to see information about a selected camera or cameras, create tags in the system, and organize cameras in a folder structure.

To access the *Manage Tags* window, do one of the following:

- In Mission Control, click the *User Menu* icon ( ), and then select *Manage Tags*.
- Right-click a video source, either in a cell or in the Sources list, and then select *Manage Tags*. 

74
Viewing Tags in the Selected Camera(s) Panel

The Selected Camera(s) panel in the Manage Tags window displays folder tag information. It also allows you to create new tags.

1. Access the Manage Tags window.
2. Click the Selected Camera(s) tab.
3. Click to select or deselect the checkboxes in the Show field, for My tags and Global tags.
   - Global tags are signified by the Global Tags icon ( ). These tags are available to all users within the system. All users can filter sources, exports, and bookmarks according to the listed tags.
   - Personal tags are indicated by the My Tags icon ( ). These tags are only available to you and administrator-level users. You can use your personal tags to assign and sort resources in a way that best reflects how you use VideoXpert.
4. In the Show tags applicable to selected camera(s), select Any or All.
   - Any shows tags that are assigned to any of the selected cameras.
   - All shows only those tags that are assigned to all of the selected cameras.
5. Click Done to exit the window.

Creating and Assigning Tags in the Selected Camera(s) Panel

You create tags while assigning them. It is important to have a strategy for tags and camera organization before you begin creating and assigning tags.

1. Access the Manage Tags window.
2. Click within the tag field and type the name of the tag you want to assign; if the tag exists, you can select it and it will autofill.
3. If the tag does not exist, do one of the following:
   - Click Create this tag (personal) to create a tag that is private to your user account.
   - Click Create this tag (global) to create a tag that other users can see and use.
4. Click Done to exit the window.

Deleting Tags in the System Panel

Through OpsCenter, users with sufficient rights can delete global tags.

1. Access the Manage Tags window.
2. Select the System tab.
3. (Optional) Click to select the checkboxes in the Show field to enable or disable My tags or Global tags.
4. Do one of the following:
   - Select the tag you want to delete, and then click the Delete icon ( ).
   - Right-click the tag you want to delete, and then click Delete.
5. In the confirmation dialog box, click Delete.
6. Click Done to exit the window.
Creating Folders in the Folders Panel

1. Access the Manage Tags window.
2. Access the Create New Folder dialog box by doing one of the following:
   - Select the Folders tab, right-click in the Folder View area, and then click Add.
   - Select the Folders tab, and then in the Folder View area, click the Add New folder icon ( ).
3. In the Create New Folder dialog box, enter a folder name in the Name field.
4. In the Create as field, click to select either the Top-level folder or Child of radio box. If you select Child of, use the pull-down menu to select the appropriate parent folder.
5. Click OK.
6. In the Drag Cameras To and From Folders area:
   a. (Optional) Use the filter to find the appropriate camera(s).
   b. Click and drag the camera(s), one at a time, to the new folder.
   A camera can be assigned to only one folder at a time.
7. Click Done to exit the window.

Renaming a Folder in the Folders Panel

1. Access the Manage Tags window.
2. Select the Folders tab.
3. To rename a folder, do one of the following:
   - Right-click the existing folder, click Edit. In the Edit Folder dialog box, enter a new value in the Name field, and then click Save.
   - Click to select the existing folder, click the Edit icon ( ). In the Edit Folder dialog box, enter a new value in the Name field, and then click Save.
4. Click Done to exit the window.

Deleting a Folder in the Folders Panel

1. Access the Manage Tags window.
2. Select the Folders tab.
3. To delete a folder, do one of the following:
   - Right-click the existing folder, click Delete, and then, in the Delete Folder? dialog box, click OK.
   - Click to select the existing folder, click the Delete icon ( ), and then, in the Delete Folder? dialog box, click OK.
4. Click Done to exit the window.
### Controlling Cameras (PTZ)

Engaging PTZ control changes the color of the border around the cell containing the source (camera) you want to control: blue indicates native PTZ control, and purple indicates digital PTZ mode.

**PTZ mode** functions when PTZ cameras are operating in live mode.

**Digital PTZ** engages when you:

- Engage PTZ controls for cameras.
- Attempt to place PTZ cameras in playback mode; return to live video to engage native mode for supported cameras.
- Press Alt+Enter to force digital PTZ mode

In **Digital PTZ** mode, all PTZ controls affect their digital equivalents. Pan or tilt commands to a camera in digital PTZ mode cause the camera to digitally zoom in the requested direction (as opposed to physically moving the camera’s field of view). Zoom commands will digitally zoom the camera from the center of the field of view. Digital PTZ enhancements may affect video quality.

### Playback Controls

Playback controls appear when you hover over a cell containing recorded video.

<table>
<thead>
<tr>
<th>Icon</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="Icon" /></td>
<td>Select the date and time of video you want to watch</td>
</tr>
<tr>
<td><img src="image2" alt="Icon" /></td>
<td>Click (when white) to activate or (when yellow) to deactivate synchronous play for a cell; select in all cells that you want to synchronize within a tab.</td>
</tr>
<tr>
<td><img src="image3" alt="Icon" /></td>
<td>Play video at normal speed.</td>
</tr>
<tr>
<td><img src="image4" alt="Icon" /></td>
<td>Pause playback and move video forward a single frame.</td>
</tr>
<tr>
<td><img src="image5" alt="Icon" /></td>
<td>Pause playback and rewind video a single frame.</td>
</tr>
<tr>
<td><img src="image6" alt="Icon" /></td>
<td>Fast-forward video. Click again to increase speeds from 2x, 4x, 8x, 16x, 32x, 64x, or 128x.</td>
</tr>
<tr>
<td><img src="image7" alt="Icon" /></td>
<td>Rewind video. Click again to increase speeds from 2x, 4x, 8x, 16x, 32x, 64x, or 128x.</td>
</tr>
<tr>
<td><img src="image8" alt="Icon" /></td>
<td>Rewind video 30 seconds and initiate playback.</td>
</tr>
<tr>

<td>Forward video to live playback.</td>
</tr>
<tr>
<td><img src="image10" alt="Icon" /></td>
<td>Take a snapshot of the current frame.</td>
</tr>
<tr>
<td><img src="image11" alt="Icon" /></td>
<td>Add a bookmark</td>
</tr>
<tr>
<td><img src="image12" alt="Icon" /></td>
<td>Enter investigation mode for all selected cells.</td>
</tr>
</tbody>
</table>
1. Select the cell you want to control.

2. Engage PTZ controls by one of the following methods:
   - In the upper left corner of the cell, click the Activate Digital PTZ Mode icon or the Activate PTZ Mode icon, whichever is present.
   - Press Alt+Enter to force digital PTZ mode, or enter PTZ mode when standard PTZ controls are unavailable. The cell border will turn blue or purple depending on the PTZ mode supported by the source.

3. Control the camera by one of the following methods. Use the joystick or mouse to affect broad motions, and the keyboard to perform more precise movements.
   - Move the joystick up and down to tilt the camera; press the up and down arrows to nudge the camera vertically.
   - Move the joystick left and right or press to pan the camera; press the left and right arrows to nudge the camera laterally.
   - Twist the joystick right to zoom in and left to zoom out; press + or Page Up to zoom in and - or Page Down to zoom out. When zooming the camera in, video may jump briefly when the camera switches from physical to digital zoom; to prevent this behavior, disable the camera’s digital zoom feature.
   - Use the mouse to pan and zoom. Click on the region to which you want to pan, and double-click to zoom in to the region.

4. To exit PTZ mode, click the Deactivate Digital PTZ Mode icon or the Deactivate PTZ Mode icon, whichever is present.

**Click-to-Center PTZ**

When PTZ mode is enabled, you can click within the cell to center a camera’s field of view on any point on which you click, within the cell. Click-to-center functionality is not supported for all cameras.

When PTZ mode is enabled within a cell:
   - Click in the cell to center the camera’s field of view on the location that you clicked.
   - Double-click to center video and zoom in on the location that you clicked.
   - Hold Alt and double-click, to zoom out.

**Executing PTZ Presets and Patterns**

A PTZ preset is a defined PTZ position; you can send the camera to the defined position by calling the preset. A PTZ pattern (or a preset tour) is a series of presets; you can configure most patterns to dwell at each preset for a specific period of time.
If a pattern or preset exists on the camera, to execute it:
1. Click the cell in which the camera video is being displayed.
2. (Optional) Execute a preset using one of the following methods:
   - Right-click the cell displaying the camera, select **Presets**, and then select the preset you want to execute.
   - Click the cell displaying the camera, begin entering the preset number. As you do this, the **Quick Launch** dialog box opens. When the preset number is displayed in the black box at the center of the **Quick Launch** dialog box, click the **Trigger Preset** icon ( ).
3. (Optional) To execute a pattern, right-click, select **Pattern**, and then select the pattern you want to execute.
4. To exit a preset or a pattern:
   - To stop a preset or a pattern, click the **Deactivate Digital PTZ Mode** icon ( ) or the **Deactivate PTZ Mode** icon ( ), whichever is present.
   - To stop a pattern only, right-click the cell, select **Pattern** and then select **Stop Pattern**.

**Creating Presets**

VideoXpert does not store presets. Any presets or patterns you create through VxOpsCenter are created and stored camera-side. When you create a preset through VideoXpert, you will assign the preset a numerical value; the preset will appear in the camera or encoder interface as “Preset <value>”. Some cameras and encoders have limitations -- a maximum value for presets or reserved values that you cannot change.

If you want to assign a non-numerical, friendly name to a preset, you must change the name of the preset from within the camera interface.

**NOTE:** For Pelco NET5500 and NET5400 series encoders, you can edit presets, but you cannot create new ones.

1. In the upper left corner of the cell, click the **Activate Digital PTZ Mode** icon ( ) or the **Activate PTZ Mode** icon ( ), whichever is present.
2. Move the camera to the position you want to mark as a preset.
3. Right click, select **Preset**, and then click Add Preset.
4. Enter or select a number for the preset. The maximum number for the preset is determined by the camera or encoder on which you are creating a preset. Some cameras have reserved values that you cannot use to set a new preset.
5. Click **OK**.

**Editing Presets**

Some presets are pre-defined by the camera or encoder; you cannot edit these presets.

**NOTE:** For Pelco NET5500 and NET5400 series encoders, you can edit presets, but you cannot create or delete presets.

1. In the upper left corner of the cell, click the **Activate Digital PTZ Mode** icon ( ) or the **Activate PTZ Mode** icon ( ), whichever is present.
2. Position the camera to the location that you will make the preset.
3. Right-click in the cell, click **Presets**, and then hover over the preset you want to change.
4. Click the **Reposition the preset to the current PTZ spatial coordinates** icon ( ).
5. Click **OK**.
Deleting Presets

Some presets are pre-defined by the camera or encoder; you cannot delete these presets.

**NOTE:** For Pelco NET5500 and NET5400 series encoders, you can edit presets, but you cannot create or delete presets.

1. In the upper left corner of the cell, click the *Activate Digital PTZ Mode* icon or the *Activate PTZ Mode* icon, whichever is present.
2. Right click in the cell, click *Presets*, and hover over the preset you want to delete.
3. Click the *Delete* icon.
4. Click *Delete.*

Using Investigation Mode

Investigation mode provides a more detailed interface for synchronized playback and video search in a single window, making it easier to investigate a scene. From investigation mode, users can also trim and export video clips from the system’s network video recorders for evidentiary safe keeping.

As you add cameras to the investigation window, the cameras appear in a detailed timeline at the bottom of the tab populates with recording information for each camera. the green areas for each camera indicate recorded video. You can use the timeline to navigate the composite recording.

Entering Investigation Mode

Investigation mode provides robust, synchronized playback controls with up to nine total cells, allowing users to fully investigate an incident across multiple cameras simultaneously. Investigation mode always opens in a new tab.

1. Synchronize the cells you want to investigate. To investigate a single cell, do not synchronize any cells; if there cells are already synchronized, then apply *Sync* to only the cell that you want to investigate.
2. Click in a cell in the *Sync* group, and then click the *Investigate* icon.
3. (Optional) Add cameras to the layout. As you add cameras, they will appear in the cells of the investigation tab, and in the camera list at the bottom of the workspace. A timeline is included in the playback controls area, indicating the availability of recorded video for all cameras.

Creating Clips

Operators can create clips of recorded information, trim video clips, save them to a playlist for safekeeping, or delete them.

The trim tool enables users to select a portion of a recording and save it to a within an investigation as a clip. Clip selections persist in the timeline, even if you choose not to add the clip to the playlist. Once you’ve selected a clip, you can resize or delete the selection using the time-box controls on the timeline.

1. When in Investigation Mode, click on the timeline where you want to select a clip.
2. Drag to select the start and end time of the clip you want to add to a playlist.
3. To add a clip to a playlist, click on the clip you want to select to expose the down arrow symbol, and then select *Add to Playlist.*
4. To delete a clip, click on the clip to expose the down arrow symbol, and select *Delete.*
   When you delete the clip, it will be removed from any playlists that you have not exported.
5. If you have changed a clip, but would like to undo the change, click on the clip to expose the down arrow symbol, and then select *Revert Changes.*
Creating a Playlist

A playlist is a series of recorded clips. Operators can trim video clips and save them to a playlist for safekeeping. Playlists are saved locally. You can reference your playlist later, but if you absolutely want to be sure that you don’t lose the clips or video in your investigation playlist, you should export the playlist to your Core server.

1. When in Investigation Mode, click the selection arrow ( ) above the clip symbol.
2. On the timeline, click on the clip to expose the down arrow symbol ( ), and select Add to Playlist. Repeat as necessary.
3. Refer to the following sections to preview, edit, or export the playlist.

Previewing and Editing Playlists

You can preview your playlist at anytime to ensure that it adequately captures your investigation. If it does not, you can reorganize the clips in the playlist or re-trim clips to refine the action captured by each clip.

- Click the playlist tools icon ( ) and then click Preview Playlist to playback your playlist. Clips are stitched together in the order that they appear in the playlist.
- Click and drag clips in the playlist to reorder them.
- Re-trim a clip by either of the following methods:
  - In the playlist, right-click a clip, select Re-trim clip, and then adjust the start and/or end times of the clip. Click Apply when complete to save your changes back to the clip and playlist.
  - Click the playlist tools icon ( ), click Re-trim clip, and then adjust the start and/or end times of the clip. Click Apply when complete to save your changes back to the clip and playlist.
  - In the timeline, click and drag the start time and/or end time of the clip, click the down arrow symbol ( ), and then select Add To Playlist. This updates the listing that is already in the playlist.
- Delete a clip from the playlist and from the timeline by one of the following methods:
  - In the playlist, click to select one or more clips, right-click one of the selected clips, and then click Delete selected clips.
  - In the playlist, click to select one or more clips, click the playlist tools icon ( ), and then click Delete selected clips.
  - In the timeline, click on a clip to expose the down arrow symbol ( ), and then select Delete.

Exporting a Playlist

Exporting a playlist allows you to save a collection of video clips, so that you can easily find and download your investigation later. Exporting video from network storage to your Core allows you to store video independently of your VideoXpert recorders for quick access later. The system exports unencrypted files in the MKV format, and encrypted files in ZIP format.

If you do not have permission to export video for the video sources in your investigation video, or the recordings saved to your playlist are no longer available from network storage, you will not be able to export a full playlist. You can still export a playlist with missing clips.

1. At the upper right corner of the playlist (left) panel, click the Export Playlist icon ( ).
2. In the Export Playlist As dialog box, enter a value in the Export Name field.
3. Click to select or deselect the checkbox for Encrypt this export; if you select encryption, enter a password in the fields. See Encrypting Export Files.
4. Click Save.
5. (Optional) Click View Exports to view the status of your export and view the Export Archive window.
6. (Optional) When your export is complete, you can download it locally:
   a. In the Export Playlist As dialog box, click View Exports
   b. In the entry for the export, click Download.
   c. Navigate to the folder in which you want to save the export; enter a new value in the File name field, or accept the default; and then click Save.
   d. (Optional) After the file is saved, click Show File to open the file location, and then open the file.

7. At any time, you can view, edit, download, and delete exports from the Export Archive. See the section titled Using the Export Archive.

Encrypting Export Files

When you export a playlist, the VxOpsCenter gives you the option to encrypt the file. Encrypting the file ensures that no one can tamper with your exported video. To decrypt and playback an export, you must have the password used when generating the export and the VideoXport Player; you cannot playback encrypted exports with another video player.

Encrypted exports appear as ZIP archives containing the playlist file, video clips (MKV) and a signature file. When you attempt to open an encrypted export, it will prompt you for the password. The password will allow the player to decrypt the export. The player will then use the signature file and public key (within the signature) to validate the export and verify that it has not been tampered with. It will then playback the file.

If you lose or forget the password to an export, your administrator can recover it for you by returning to the export archive and selecting the export for which you need a password.

Using the Export Archive

From the Export Archive window, you can download, edit the name of, or delete exports. to access the window:

- If you are still in the Export Playlist As dialog box, click View Exports.
- In Mission Control, click the User Menu icon ( ), and then select Show Export Archive.

Downloading Exports

You can download exports from the Export Archive, which appears automatically when you export a playlist. You can also access the Export Archive at any time, as described below.

NOTE: If you are using VxOpsCenter on a VxPro server, you do not need to download exports; you can browse to the exports directory on your data drive to access exports.

Unencrypted exports use the MKV format. Encrypted exports are ZIP files; if the export file has been encrypted, you must use the VideoXpert Player to decrypt and playback the file.

1. Access the Export Archive.

2. (Optional) Use the filters to sort the list of available exports by camera tag or other data associated with the export (camera name, ID, exporting user, etc).

3. To download the archive without VideoXpert Player:
   a. Click Download for the archive row.
   b. Browse to a location and type a value in the File name field.
   c. Click Save.
   d. (Optional) When the archive has been downloaded, click Show File to open the browser to the file location.
To download the archive and the VideoXpert Player executable:

a. In the left column (untitled), click the **Export Archive Menu** icon ( ).

b. Click **Download with VideoXpert Player**.

c. Browse to a location and type a value in the **File name** field.

d. Click **Save**.

e. (Optional) When the archive has been downloaded, click **Show File** to open the browser to the file location.

### Editing an Export Name

1. To access the **Export Archive**, click the **User Menu** icon ( ) in mission control, and then select **Show Export Archive**.

2. (Optional) Use the filters to sort the list of available exports by camera tag or other data associated with the export (camera name, ID, exporting user, etc).

3. Click the pencil icon ( ) in the left column for the archive row.

4. In the **Edit Export Name** dialog box, type a value in the **New Name** field.

5. Click **Save**.

### Deleting one or more Exports

Deleting an export from the **Export Archive** sends it to the Trash Bin; you must delete an export from the Trash Bin to permanently remove it from the system. This two-step process prevents users from inadvertently removing exported files from the system.

1. To access the **Export Archive**, click the **User Menu** icon ( ) in mission control and select **Show Export Archive**.

2. In the **Export Archive** window, view the list of exports in the table.

   - (Optional) Sort by any column title.

   - (Optional) Click to expand **Filter**, type a value in the search field; and/or click in the **Camera Tags** field, and then click to select the tags. Click **Clear** in the **Camera Tags** field to clear the tags, or click **Clear Filters** at the upper right of the **Export Archive** window to clear both of the filter fields.

3. (Optional) To delete an export, click the trashcan icon ( ) in the left column for the archive row; in the confirmation dialog box, click to select or deselect the checkbox to **Delete Permanently**; and then click **Yes**.

   - If you did not select **Delete Permanently**, the archive is removed from the current list, and is added to the **Export Trash Bin**.

   - If you did select **Delete Permanently**, the archive is deleted, but not added to the **Export Trash Bin**.

4. (Optional) To delete multiple exports:

   a. Click to select the exports to delete (use the Ctrl or Shift keys).

   b. Click the trashcan symbol ( ) in one of the selected rows.

   c. Click to select or deselect the checkbox to **Delete Permanently**, and then click **Yes**.

   If you did not select **Delete Permanently**, the archive is removed from the current list, and is added to the **Export Trash Bin**.

   If you did select **Delete Permanently**, the archive is deleted, but not added to the **Export Trash Bin**.
5. If you want to view deleted exports, click the down arrow to the right of Export Archive, and then select View Trash Bin.
   - To move an export from the Export Trash Bin to the Export Archive window, click the export Restore button.
   - To delete multiple exports from the trash bin, click to select the exports (use Ctrl or Shift), click the Export Archive Menu icon ( ), click Delete Selected Exports, and then click Delete Permanently in the confirmation dialog box.
   - To return to the Export Archive window, click the X symbol in the upper right corner of the Export Trash Bin window.

6. If you want to delete failed exports, click the down arrow to the right of Export Archive, and then click Delete All Failed Exports. In the confirmation dialog box, click to select or deselect the checkbox for Delete Permanently, and then click Yes.

7. To exit the window, click the X in the upper-right corner of the window, or click outside the window.

Using Investigation to View Video Stored on a Camera's Local Storage

If your camera or video source is recording video locally (using an SD card or in concert with ONVIF Profile G), the timeline will display the ; the device tooltip will also alert you to multiple recording locations. You cannot view video while it is stored on the camera; you must first push video from the camera to a VideoXpert Storage recorder in order to view a camera’s local recordings.

NOTE: Refer to documentation for your camera to enable and setup local recording. The process to enable and use local recordings may differ by camera model.

Click to open an investigation tab showing the camera’s various recording locations as separate timelines. The timelines are labeled as follows:

- **Default Recorder**: Video recorded by your VideoXpert Storage recorder. These are the recordings you would normally see when you playback video.

- **Downloaded from Camera**: Video pushed from the camera to the recorder does not overwrite video already stored on the recorder; the video recorded on the camera and the video recorded on the VXS recorder coexist. This timeline shows video that has been pushed from the camera to the recorder. You can only view these recordings when in the multi-recording investigation tab.

- **Camera Storage**: Displays thumbnails representing video stored on the camera. You must use the timeline to create and push video clips to default storage to view it.

**Figure 4: Investigation with Edge Storage**

### Pushing Video from the Camera to Storage

This process assumes your camera is recording video locally.

1. Click to enter an investigation with timelines representing VideoXpert Storage, the camera’s local storage, and video pushed from the camera to the recorder.

2. Within the **Camera Storage** timeline, click and drag along the section of the Camera Storage timeline to indicate the clip or section of video that you want to view.
3. Click on the clip to expose the down arrow symbol ( ), and then select **Add to Default Recorder**.

4. Click **OK**.

You can now play video that was moved from the camera to storage; it will appear in the **Downloaded from Camera** timeline.

### Playing Back Video After Moving it to Storage

Video that has been copied from the camera to Storage will appear in the second timeline, title **Downloaded from Camera**. Select the section of video you want to play from here and play back. Video is synchronized between your default recorder and the **Downloaded from Camera** timeline.

### Working with Plugins

Plugins are components that add enhance the capabilities of VxOpsCenter Client. VxOpsCenter Client supports two types of plugins:

- **Overlay** plugins provide information supplemental to video and audio sources, and are meant to be used in conjunction with a source; both a source and overlay plugin will populate the same cell.

- **Content** plugins consume a cell by themselves; adding a content plugin to a cell that is already populated will replace whatever was in the cell.

**NOTE:** You can add more than one plugin to a workstation, but you should not run more than one mapping plugin per workstation.

To add a plugin to your workspace:

1. **(Optional)** Select the cell in which you want to add a plugin.

2. Access the available plugins by one of the following methods:
   - In Mission Control, click to expand **Content**, and then click **Plugins**.
   - In Mission Control, click the **Plugins** icon ( ).

3. If necessary, click to expand **Content Plugins** or **Overlay Plugins**.

4. If the plugin you need is not present in the **Plugins** panel, install it. See **Installing Plugins**.

5. Double-click the plugin to add it to the selected cell (if you selected a cell), or drag the plugin to a different cell. Double clicking a plugin will open the plugin in a manner that is consistent with video sources, as defined by the **When double-clicking a source** setting, available under **Preferences**.

6. If a dialog box opens, respond to any prompts.

### Installing Plugins

Close VxOpsCenter application before installing plugins.

To install a plugin, run the plugin installer, typically an MSI file.

Plugins install under `C:\ProgramData\Pelco\OpsCenter\Plugins`. The Ops Center application searches this directory recursively on start-up to populate the plugins available to it.

### Using the Event Viewer Plugin

The Event Viewer plugin allows you to view all events, and filter and sort the events. To use Event Viewer:
1. For VideoXpert Professional, click Event Log or open the Event Viewer plugin to open the Event Viewer in a cell of the workspace. For VideoXpert Enterprise, access Event Viewer through Admin Portal.

2. (Optional) In the Filter (left) panel of the cell, make one or more of the following selections:
   - Enter or select a From date, From time, To date, and To time.
   - In the Show events with status area, click to select or deselect checkboxes for Needs Attention, In-Progress, Acknowledged, and/or Logged.
   - (Optional) Enter or select Range for the Severity of events to display.
   - (Optional) Select a User from the drop-down menu. To show only those actions related to the selected user, click to select the checkbox for Only show user related actions.
   - (Optional) In the Events area, select an event category from the drop-down menu, and then select the event type from the drop-down menu below -AND-.
   - (Optional) To clear the filter, click Reset Filter.

3. (Optional) The Pause Events checkbox is selected by default. To allow the list to update, click to deselect the checkbox.

4. (Optional) To sort, select the criterion from the drop-down menu to the right of Sort by, and then select Ascending or Descending order from the drop-down menu.

5. (Optional) To copy details of an event to paste into another application, double-click to select the event, click Copy Details, and then click Copy all to clipboard. Navigate to the target application and paste the content.

**Using the Image Viewer Plugin**

The Image Viewer Content plugin allows you to display a directory of images within a cell of the Ops Center Client. The images rotate at a designated interval, or you can manually tab through the images. You can use the Image Viewer to scroll through important snapshots from your Ops Center, or to display a series of important images (persons of interest, etc) in the same workspace that you use for video.

**NOTE:** The Image Viewer path is stored on the Core, and will follow your account across workstations; if you set a path local to a particular workstation, you will not be able to view your images on another workstation.

1. Open the Image Viewer plugin.

2. Select the directory containing the images you want to view; this directory can be local or a network location.

3. If there is no directory, create one. To do so:
   a. Click the menu icon and then click Select picture directory.
   b. Browse to an appropriate location, and then click Make New Folder.
   c. Type in a name for the folder, and then click OK.

4. (Optional) To select the speed at which to scroll through the images, click the menu icon, click Cycle images every..., and then click one of the options.

5. (Optional) Click to select or deselect Show Date/Time.

6. (Optional) Click to select or deselect Show Title.

7. (Optional) Click to select or deselect Fade between images.

8. (Optional) To select an existing picture directory, click Select picture directory, navigate to the folder, and then click OK.

9. (Optional) Control scrolling through the images by using the back icon, the pause icon, and the forward icon at the lower right of the Image Viewer plugin.
Using the Mapping Plugin

The Mapping Plugin provides an interface to arrange cameras according to their physical locations on a map, making it easier to find the right camera and view to suit your needs.

**NOTE:** You should not run more than one mapping plugin per workstation.

If running the Ops Center software on Windows 8N, you may have to install the Media Player and Visual C++ redistributables to run the Mapping Plugin.

Understanding Mapping Permissions (VideoXpert Enterprise Only)

The Mapping plugin has its own unique, cascading permissions within the Admin Portal. Aside from the Use Map permission, all other permissions allow resource restrictions. “Resources” in this case refers to the maps themselves. However, camera permissions are applied to maps as well. If a user lacks permissions to a particular camera, it will not appear on the map or in the list of cameras the user can add to a map.

<table>
<thead>
<tr>
<th>Permission</th>
<th>Description</th>
<th>Resource Access (Maps)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use Map</td>
<td>Allows use of the mapping plugin.</td>
<td>Any</td>
</tr>
<tr>
<td>View Maps</td>
<td>Determines which maps a user can access.</td>
<td>Any, Selected</td>
</tr>
<tr>
<td>Manage Map Files</td>
<td>The user can add, update, and delete maps.</td>
<td>Any, Selected</td>
</tr>
<tr>
<td>Place Cameras on Map</td>
<td>The user can add cameras to maps, move cameras on maps, and delete cameras from maps.</td>
<td>Any, Selected</td>
</tr>
</tbody>
</table>

Launching the Mapping Plugin

1. Open the *Mapping* plugin.
2. When you first run the mapping plugin, it will prompt you to add a map. In the **Select the map that you would like to load** field, select a DWG, JPEG, or GIF file from the drop-down menu; in the **When launching Mapping** field, click to select the appropriate radio button; and then click **OK**.

Configuring the Mapping Plugin

At any time, you can use the Edit Mode to configure Mapping. Options include: selecting a map file, adding and deleting maps, adding cameras to maps.

Selecting a Map File

When you update or change a map file, the map is added to or updated in the Available Maps. See *Managing Available Maps*.

1. Click **Edit Mode**.
2. Click to expand **Map File**.
3. Click **Update or change map file**, navigate to the map file to use, and then click **Open**.
4. In the **Load New Map** dialog box, enter a value in the **Name Your Map** field to save it as a new map, or retain the current map name to update the existing map.
5. Click **Open**. If adding a DWG file, select the layers that you want to import.
6. If you have finished configuring Mapping, click **Save**.

7. In the **Drawing** confirmation dialog box, click **OK**.

### Adding Cameras to a Map

While in **Edit Mode**, you can place cameras on the map and rotate them to reflect their orientation within the environment. Cameras marked with a green "M" are already placed on the current map. When adding, moving, and rotating cameras, you must save before you **Exit Edit Mode** or you will lose all of your changes.

**NOTE:** Do not try to add cameras to the map from Mission Control. You must add cameras to the map from the **Edit Mode. Cameras** area. Dragging cameras from Mission Control will replace the mapping plugin with a video source rather than placing a camera on the map.

1. Click **Edit Mode**.
2. Click to expand **Cameras**.
3. (Optional) Type a value into the **Filter** field to shorten the list of cameras to from which to choose. You can also click to select or deselect the checkbox for **Apply Filter to Map**.
4. (Optional) Click to expand **Advanced Filter Options**, and then select values from the drop-down menus for one or more or the following options: **Online**, **Recording**, **On Screen**, or **On Map**. You can also type or select values in the **Tags** field.
5. (Optional) To sort the sources by name, click **Source Name**. To toggle between ascending and descending order, click **Source Name** again. To sort the sources by number, click **#**. To toggle between ascending and descending order, click **#** again.
6. From the list of sources, drag sources to the appropriate location on the map.

### Managing Available Maps

In the **Available Maps** area of **Edit Mode**, you can add or delete maps. Maps are backed up as a part of Core backups. If you delete a map in error, you can recover the map along with camera associations by performing a Core recovery.

To view, add, or delete available maps:

1. Click **Edit Mode**.
2. Click to expand **Available Maps**.
3. (Optional) To add a map:
   a. Click **Add**, navigate to the map, and then click **Open**.
   b. In the **Load New Map** dialog box, enter a value in the **Name Your Map** field, and then click **Open**.
      When you click **Yes**, you will exit **Edit Mode**.
4. (Optional) To delete a map: In the list of available maps, click to select a map; click **Delete**; and then click **Yes** in the **Delete Map?** confirmation dialog box.
      When you click **Yes**, you will exit **Edit Mode**.

### Setting User Preferences for Mapping

At any time, you can change the user preferences from the Mapping plugin.

1. At the upper right of the Mapping plugin cell, click the gear icon (** »**).
2. (Optional) Click to select the appropriate radio button in the **Launching Preferences** area. If you select **Always load a specific map**, select a value from the drop-down menu in the **Choose Map** field.
3. (Optional) Click to select or deselect the appropriate checkboxes in the Map Recentering area. If you select Allow recentering on a different map, you can also select Prompt me before recentering on a different map.

4. Click Save Changes.

Viewing a Map

When using the Mapping plugin, you can change the view in the following ways:

- (Optional) Select an available map: If you have more than one map available on the Mapping plugin, you can select which map to view. In the Map field at the upper left of the Mapping cell, select a map from the drop-down list.

To add a map, see Managing Available Maps.

- (Optional) Show or hide cameras. Cameras are saved as a separate layer on the map. This enables you to hide maps, for an unobstructed view of the map itself. To show cameras, click to select the checkbox for Show Cameras; to hide cameras, click to deselect the checkbox.

- (Optional) View camera data. To view data for a specific camera, click the camera on the map. Data includes: the camera name, status, Watched by information, Tags, and Details (IP address, ID, recording data, model and serial numbers, and software/firmware version).

- (Optional) Move the field of view of the map. To do so, click on the map and drag it until the view is displayed.

- (Optional) Move and rotate a camera. Click to select a camera. This enables a handle ( ), which allows you to turn the icon to reflect its field of view or to “pick it up” and move it to another location on the map.

- (Optional) Zoom in and out by one of the following methods: You Can also
  - Use the scroll wheel on your mouse.
  - On the map, click to zoom in; click to zoom out.
  - On your keyboard, press the + key to zoom in; press the - key to zoom out.

Cameras will not block or impede areas of the map at different zoom levels.

- (Optional) Open a camera from the map. Double-click a camera or a group of cameras to open them in a new tab.

To select multiple cameras, press the Ctrl key while dragging to select a region that includes the cameras to select.

Using the Browser Plug-in

The browser plug-in provides a means to access your Admin Portal and other web resources from within the Ops Center. By default, the browser plug-in points to your Core server and passes your Ops Center credentials to the Admin Portal, automatically logging you in.

To add the plug-in to your workspace, click Content and drag the Browser plug-in into a cell.

Closing a Plugin

If you close a plugin without saving your changes, you will lose the changes.

Close a plugin by one of the following methods:

- Click the icon in the upper right corner of the Mapping plugin.

- Click the Close Plugins icon to the immediate left of the Dock/Undock Mission Control icon at the bottom of the window; and then click the icon associated with the plugin.
Responding to Events

Events in VxOpsCenter are reported in the following locations of the UI:

- The **Event Viewer** lists all events, and allows you to filter and sort the full list of events to include only those that you want to view.
- The **Event Notifications** window enables you to research, snooze, and acknowledge current events.

Using the Event Viewer

The **Event Viewer** lists events on the system. To use Event Viewer, see the section titled *Using the Event Viewer Plugin*.

Using the Event Notifications Dialog Box

When an event pertinent to your user account occurs, an event notification dialog box will pop-up on your monitor and present ways in which you can respond to the event. Event notifications requiring acknowledgment persist until you or other users with the same role acknowledge them.

The events icon in the lower-right corner of your workspaces also shows the number of active events that require your attention.

1. Access an event notification by one of the following methods:
   - Click the events icon ( ) at the lower right of the window, and then click to select the notification. Click again to close the list of notifications.
   - Click the **Expand** icon ( ) in the bottom left corner of the event notification window that pops-up on your screen, and then click to select the notification on which to act. Click the icon again, now labeled **Collapse**, to close the window.

   Then event notification includes the type of event, the device (for example, the specific camera) on which the event occurred, the date and time of the event, and the severity of the event.

2. (Optional) Click **In-Progress** to indicate that you are either investigating the event or are in the process of correcting an event condition.

3. Click **Acknowledge** to indicate that the event is no longer relevant; or that the event condition has been accounted for or corrected. Acknowledging an event clears the event notification.

4. (Optional) If you accessed an event from the event notification pop-up window, you can click **Acknowledge All**, and then click **OK** in the confirmation dialog box, to clear all existing events from the event notification window.

5. (Optional) Click **Event Log** to open the event in the **Event Viewer** window.

Logging Out

When you log out, the application saves your desktop configuration, including video stream and plug-ins.

1. In Mission Control, click the **User Menu** icon ( )

2. Click **Log Out**

3. In the **Log Out** confirmation dialog box, click **Log Out**

Closing the Application

It is important to close the application gracefully. Attempting to close the application through the start bar or by other means will leave the application processes open, continuing to consume resources.
All plug-in processes must be closed before the application itself can close. When you attempt to exit the application, the application will first save and close all plug-in applications before it can close. Depending on the number of plug-ins populating your workspace, this may take a few moments; do not attempt to forcefully close the application while it is shutting down, or you may lose unsaved workspace information or leave plug-ins and application processes open.

1. In Mission Control, click the **User Menu** icon ( )
2. Click **Exit VxOpsCenter**.
3. In the **Exit VxOpsCenter** dialog box, click **Exit**.
