Transactional Data Analysis

Seamlessly Integrating Transactional Data Analytics

Loss prevention is top of mind for most business owners. And when the losses are the result of employee theft, the situation becomes even more precarious. Identifying a solution that can identify, track and predict theft is key. That is why the integration of eConnect™ and VideoXpert™ by Pelco is the ideal solution.

Through a uniquely developed plugin, eConnect's software integrates transactional data with associated video and makes it easily accessible via the VideoXpert single user interface. Whether in retail, casinos, hotels, or any business where transactional data occurs, this integration makes early loss prevention possible, saving business owners thousands of dollars while providing the functionality they demand.

At a Glance

- Transactional data & video synchronization
- Live and playback video
- Real-time transactional data
- Predictive activity analysis
- Transactional analysis against historical trends
- Identify and track theft
- Integration of eConnect's POSConnect™ Loss Prevention software
- Integration to four gaming modules with Casino Connect™ Game Protection software

Choose with Confidence.

POSConnect™ (Loss Prevention)

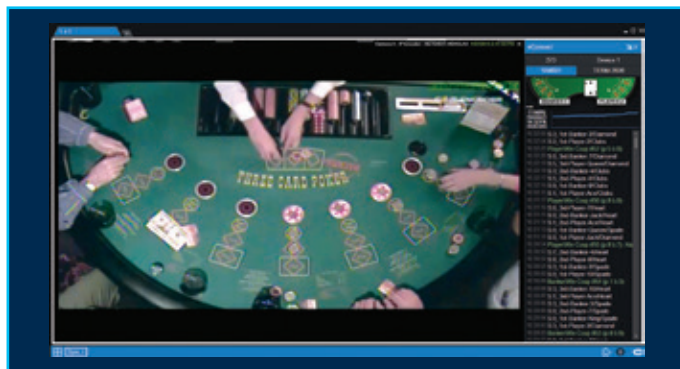

In any Point-Of-Sale (POS) environment, it is becoming increasingly more difficult to detect fraud. POSConnect™ allows business owners to focus on running their businesses while the eConnect solution protects their investments.

Features:

- Real-time register transaction data displayed
- Facilitates easy review of activities and transactions
- Ideal for detecting and identifying employee theft and fraud, customer service issues or policy and procedure violations
- Increased visibility to events

Casino Connect™ (Game Protection)

In Casino applications, the speed of activities taking place across a card table can make it difficult to manage and track every transaction. This game protection module minimizes the risk by deploying critical analytics for easy detection.

Features:

- Live and historic player-ratings data captured for quick view of activity at any point of time
- Access to four gaming modules for increased visibility to gaming activity to prevent loss or fraud
- Ticket-in/Ticket-out (TITO) Module: Enables surveillance to quickly monitor ticket activity throughout the casino floor
- Countdown™ Blackjack Module: A module which captures data from electronic blackjack shoes to identify the count, side bet probability and more for real-time alerts of advantaged players
- Baccarat Module: Provides real-time game statistics and alerts to identify errors or fraud
- Ratings Module: Seamlessly connects to the casino's rating system allowing them to visually verify ratings with video
- Slot Events Module: Links slot system activity with video activity to monitor anomalies and potential vulnerabilities

Model: OCCPLUGECON **eConnect Ops Center Plugin**

About eConnect™

eConnect is headquartered in Las Vegas and is one of the fastest-growing technology businesses in the country. eConnect maximize loss prevention for business through video-driven analytics. eConnect improves customer service through behavioral intelligence and predictive analysis and provides revolutionary technology to deliver actionable information to retail, gaming and hospitality companies.
