Supplied Parts
- EVO-05 Mini Outdoor Camera
- Pendant Mount Assembly
- Quick Start Guide
- Hex Screwdriver
- Spanner

Installation & Mounting
The Evolution Mini Outdoor Pendant Mount Camera Kit is intended for use with compatible wall, pole, pendant mount brackets.

Preparation
1. Remove the two dome cover screws using the Hex Screwdriver.
2. Carefully remove the dome cover and set aside.

Installation
1. Pass the unterminated network cable through the cable gland at the top of the pendant assembly.
2. Tighten the cable gland using the supplied spanner.
3. Align the camera base to the Pendant Mount assembly and twist into place.
4. Secure the Pendant Mount assembly into the bracket or mounting pole.
5. To ensure the cable does not twist, do not rotate the lower part of the Pendant Mount Assembly.
6. Using the Hex Screwdriver, fully tighten the Pendant Mount Assembly to the mounting bracket.
7. Trim the network cable to length and terminate, securing it to the camera module.
8. Ensure the excess cable fits comfortably into the back box of the Pendant Mount Assembly.
9. Secure the camera to the Pendant Mount Assembly.
10. Attach the dome cover to the camera.
11. Tighten the Pendant Mount Assembly locking screw.
12. Remove the protective dome cover film.

Important
- Read these instructions carefully before installing or operating this camera.
- This camera should be installed by a qualified service person and the installation should conform to local and national regulations.
- Certified as FCC Class A. In a domestic environment this camera may cause radio interference in which case the user should take adequate measures.

DANGER: RISK OF EXPLOSION IF REPLACING A BATTERY WITH AN INCORRECT BATTERY TYPE.

Configuring network settings

Powering the camera
Supply power to the camera with PoE IEEE802.3af through the integrated RJ45 Ethernet cable.
In order to use the camera you need the IP address.
There are two typical installation types.
- DHCP server or router to automatically assign unique valid IP addresses to each camera.
- A manually configured network using static IP addresses.
If your network has a DHCP server, go to Viewing images for the first time.

Static IP installation
If a DHCP server is not available, the camera adopts the default IP address 192.168.0.200. Manually assign each camera with a new unique IP address.

Note: There is a detailed explanation of how to adjust IP settings in the camera's User Manual and Camera Configuration Tool User Manual.

Using the Camera Configuration Tool

The Camera Configuration tool quickly finds the IP and MAC addresses of all Oncam IP cameras connected to the network.
It also allows you to change network settings, configure the system and perform software updates on multiple cameras.
Initiate a new scan by clicking the Full Discover button.
Start the application by clicking the CameraConfigurationTool icon found on your desktop or from the program list (under Oncam Grandeye). The software scans the network and provides a list of all connected Oncam IP cameras.

Note: Some functions in this tool require a username and password. The default username and password is ‘admin’.

Viewing images for the first time

To view live images from any camera on the network:
1. If you know the IP address of the camera, enter this into the address bar of your web browser (Internet Explorer, Edge, Firefox or Chrome). The camera should be on the same network.
2. Enter the Username and Password (default is “admin”).
3. Using the Camera Configuration Tool, select one or multiple cameras from the camera list
4. Select your browser to open the web interface.
5. Enter your Username and Password (default is “admin”).

Note: Ensure you have the latest VLC Media Player (http://www.videolan.org/vlc/index.html) for viewing camera images on the web interface.
